

Server Requirements

The Laravel framework has a few system requirements. You should ensure that your web server has the following minimum PHP version and extensions:

- PHP 8.1 or higher
- Ctype PHP Extension
- cURL PHP Extension
- DOM PHP Extension
- Fileinfo PHP Extension
- Filter PHP Extension
- Hash PHP Extension
- Mbstring PHP Extension
- PCRE PHP Extension
- PDO PHP Extension
- Session PHP Extension
- Tokenizer PHP Extension
- XML PHP Extension

How to install WASender > Install with APANEL

Note: this guide makes for apanel based hosting panel but the steps are same for all servers panel.

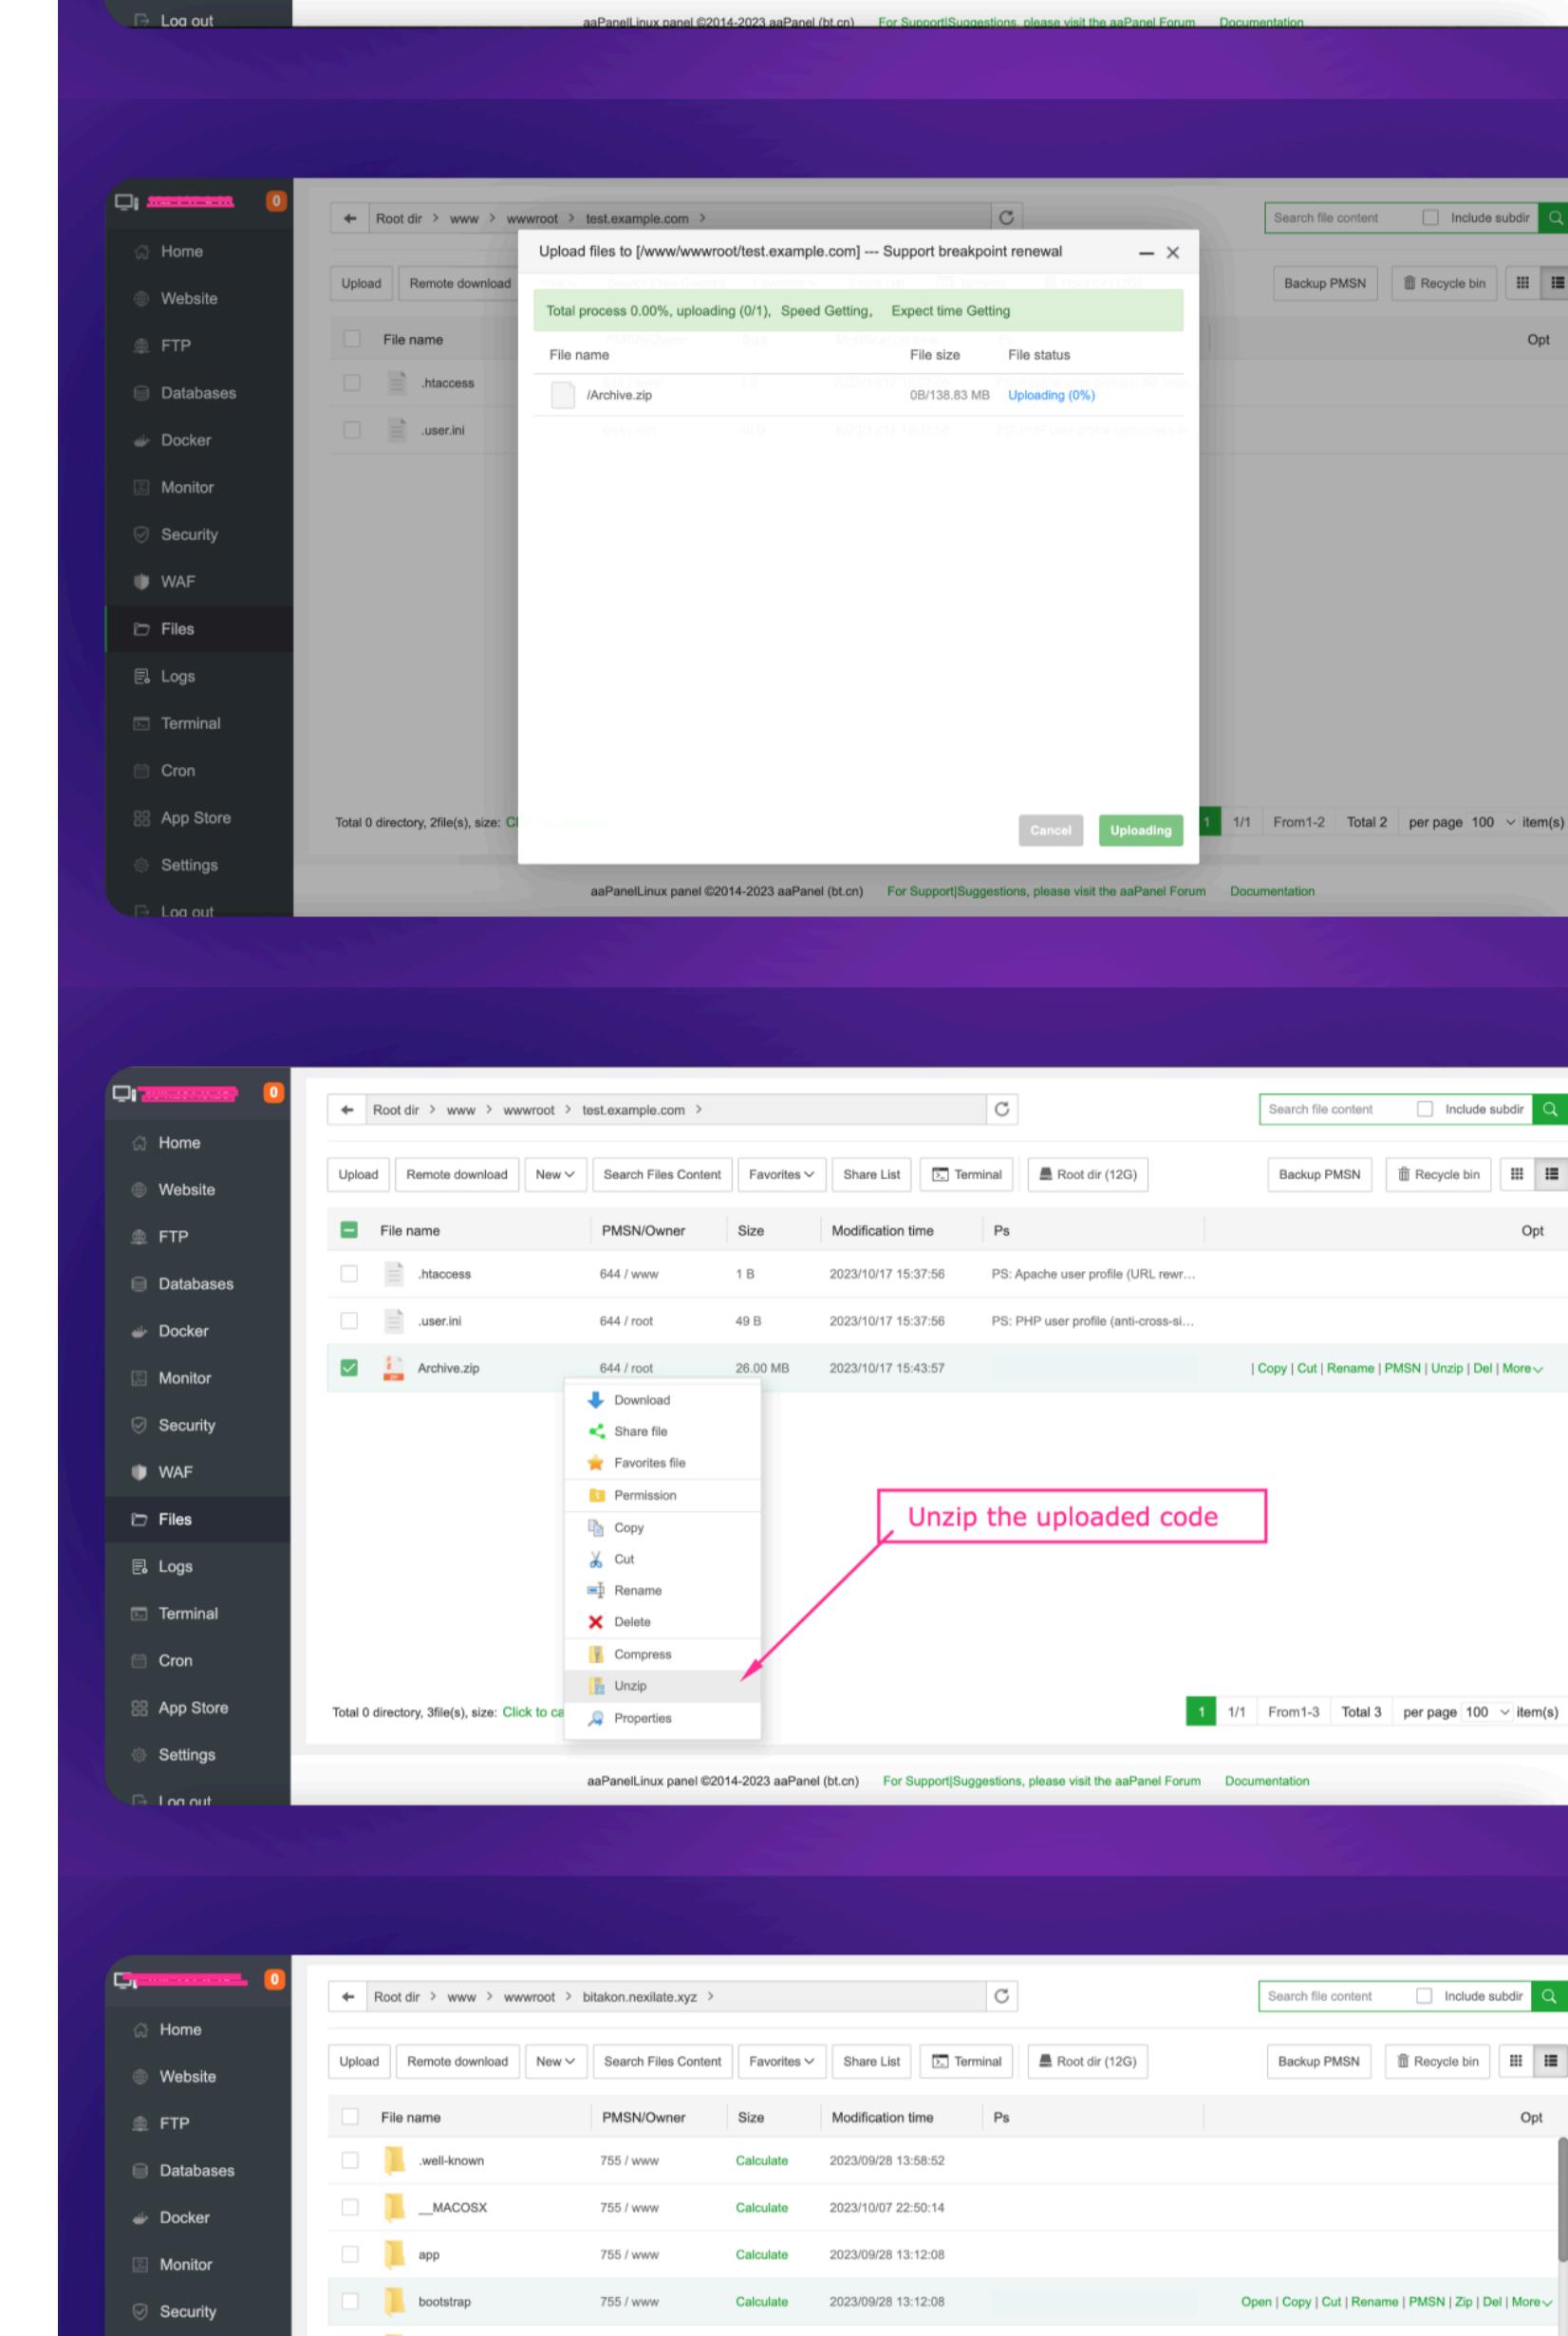

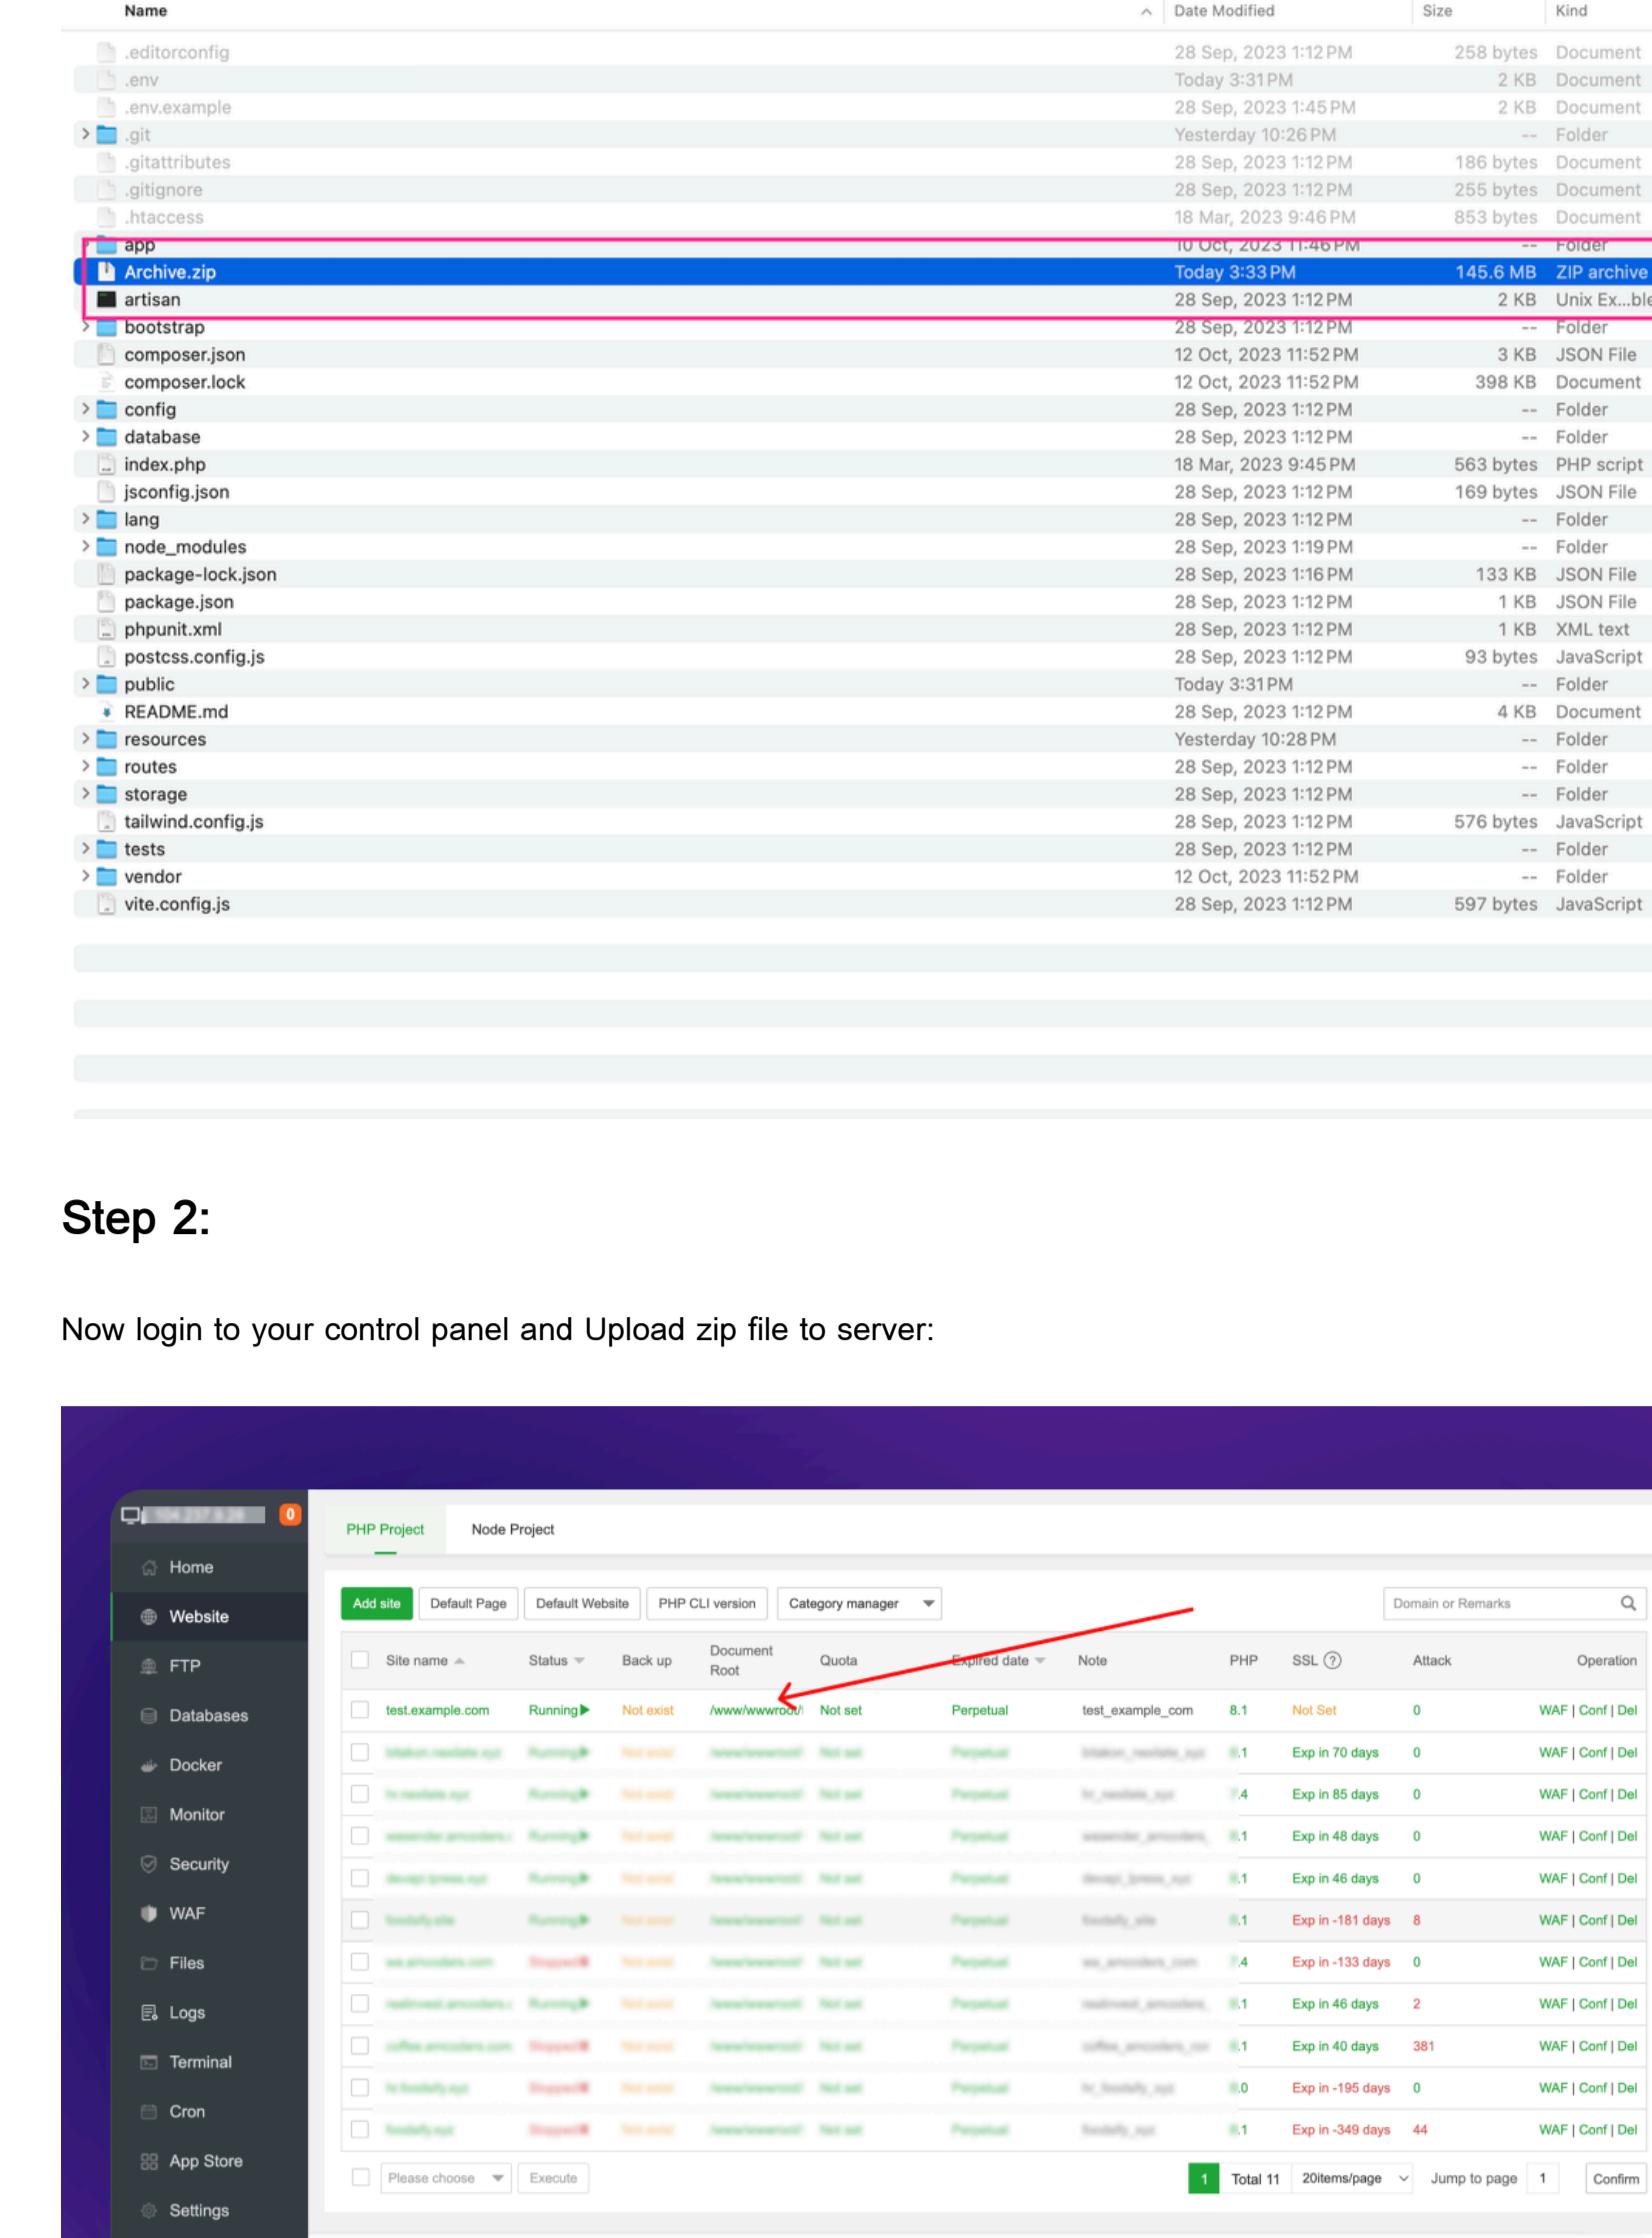

Download file from codecanyon and extract in your pc and you will get 02 folder. Listed below:

1. Documentation
2. wasender

Step 1:

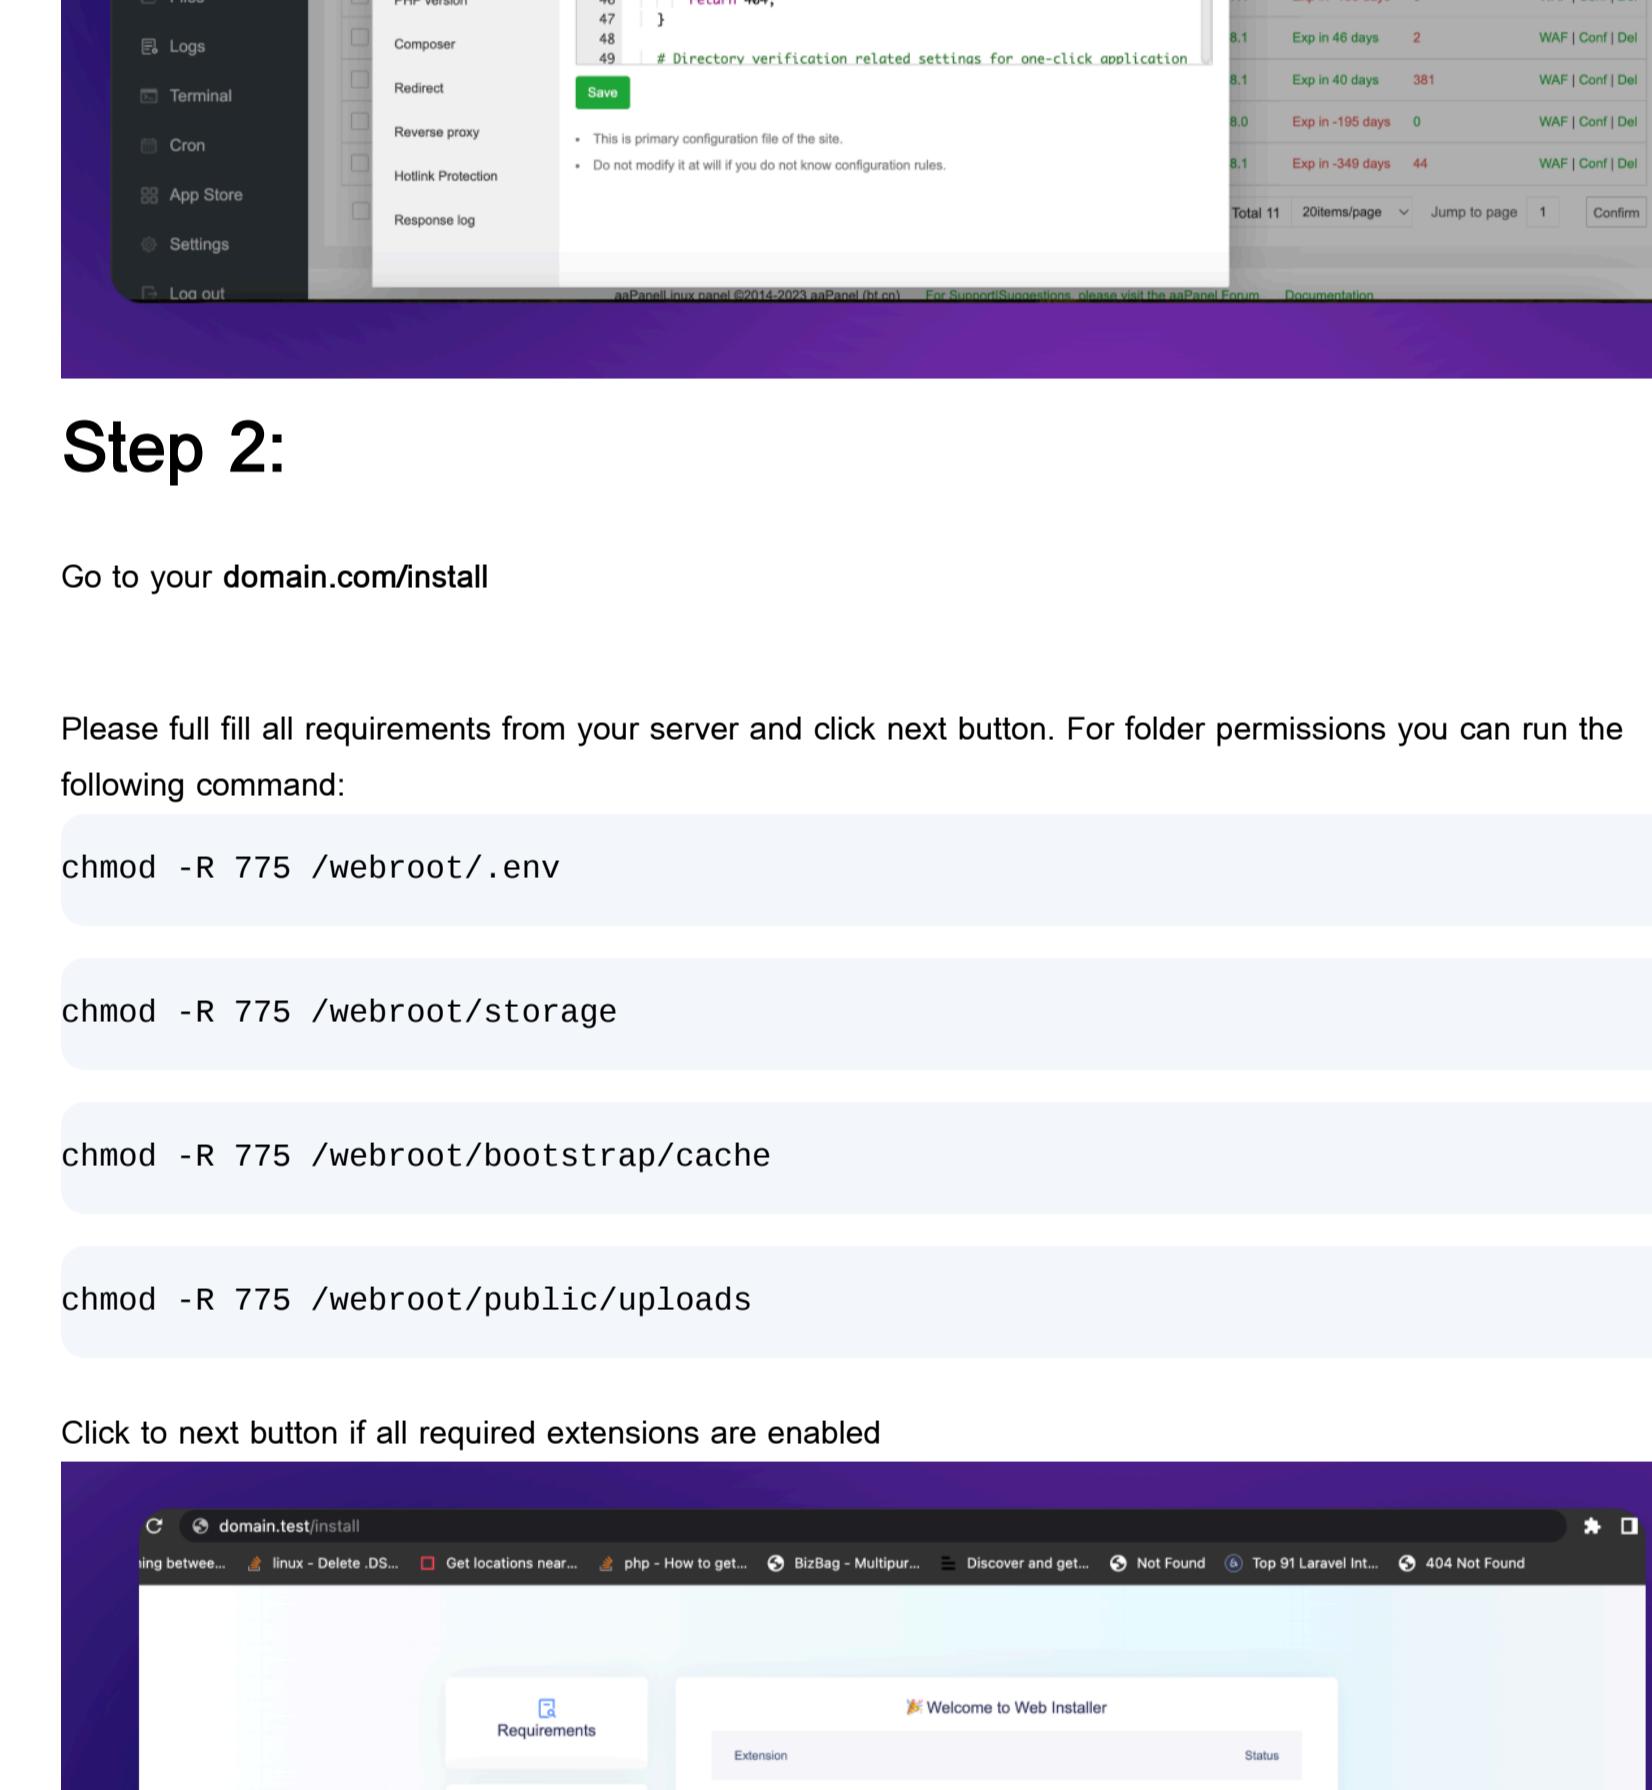

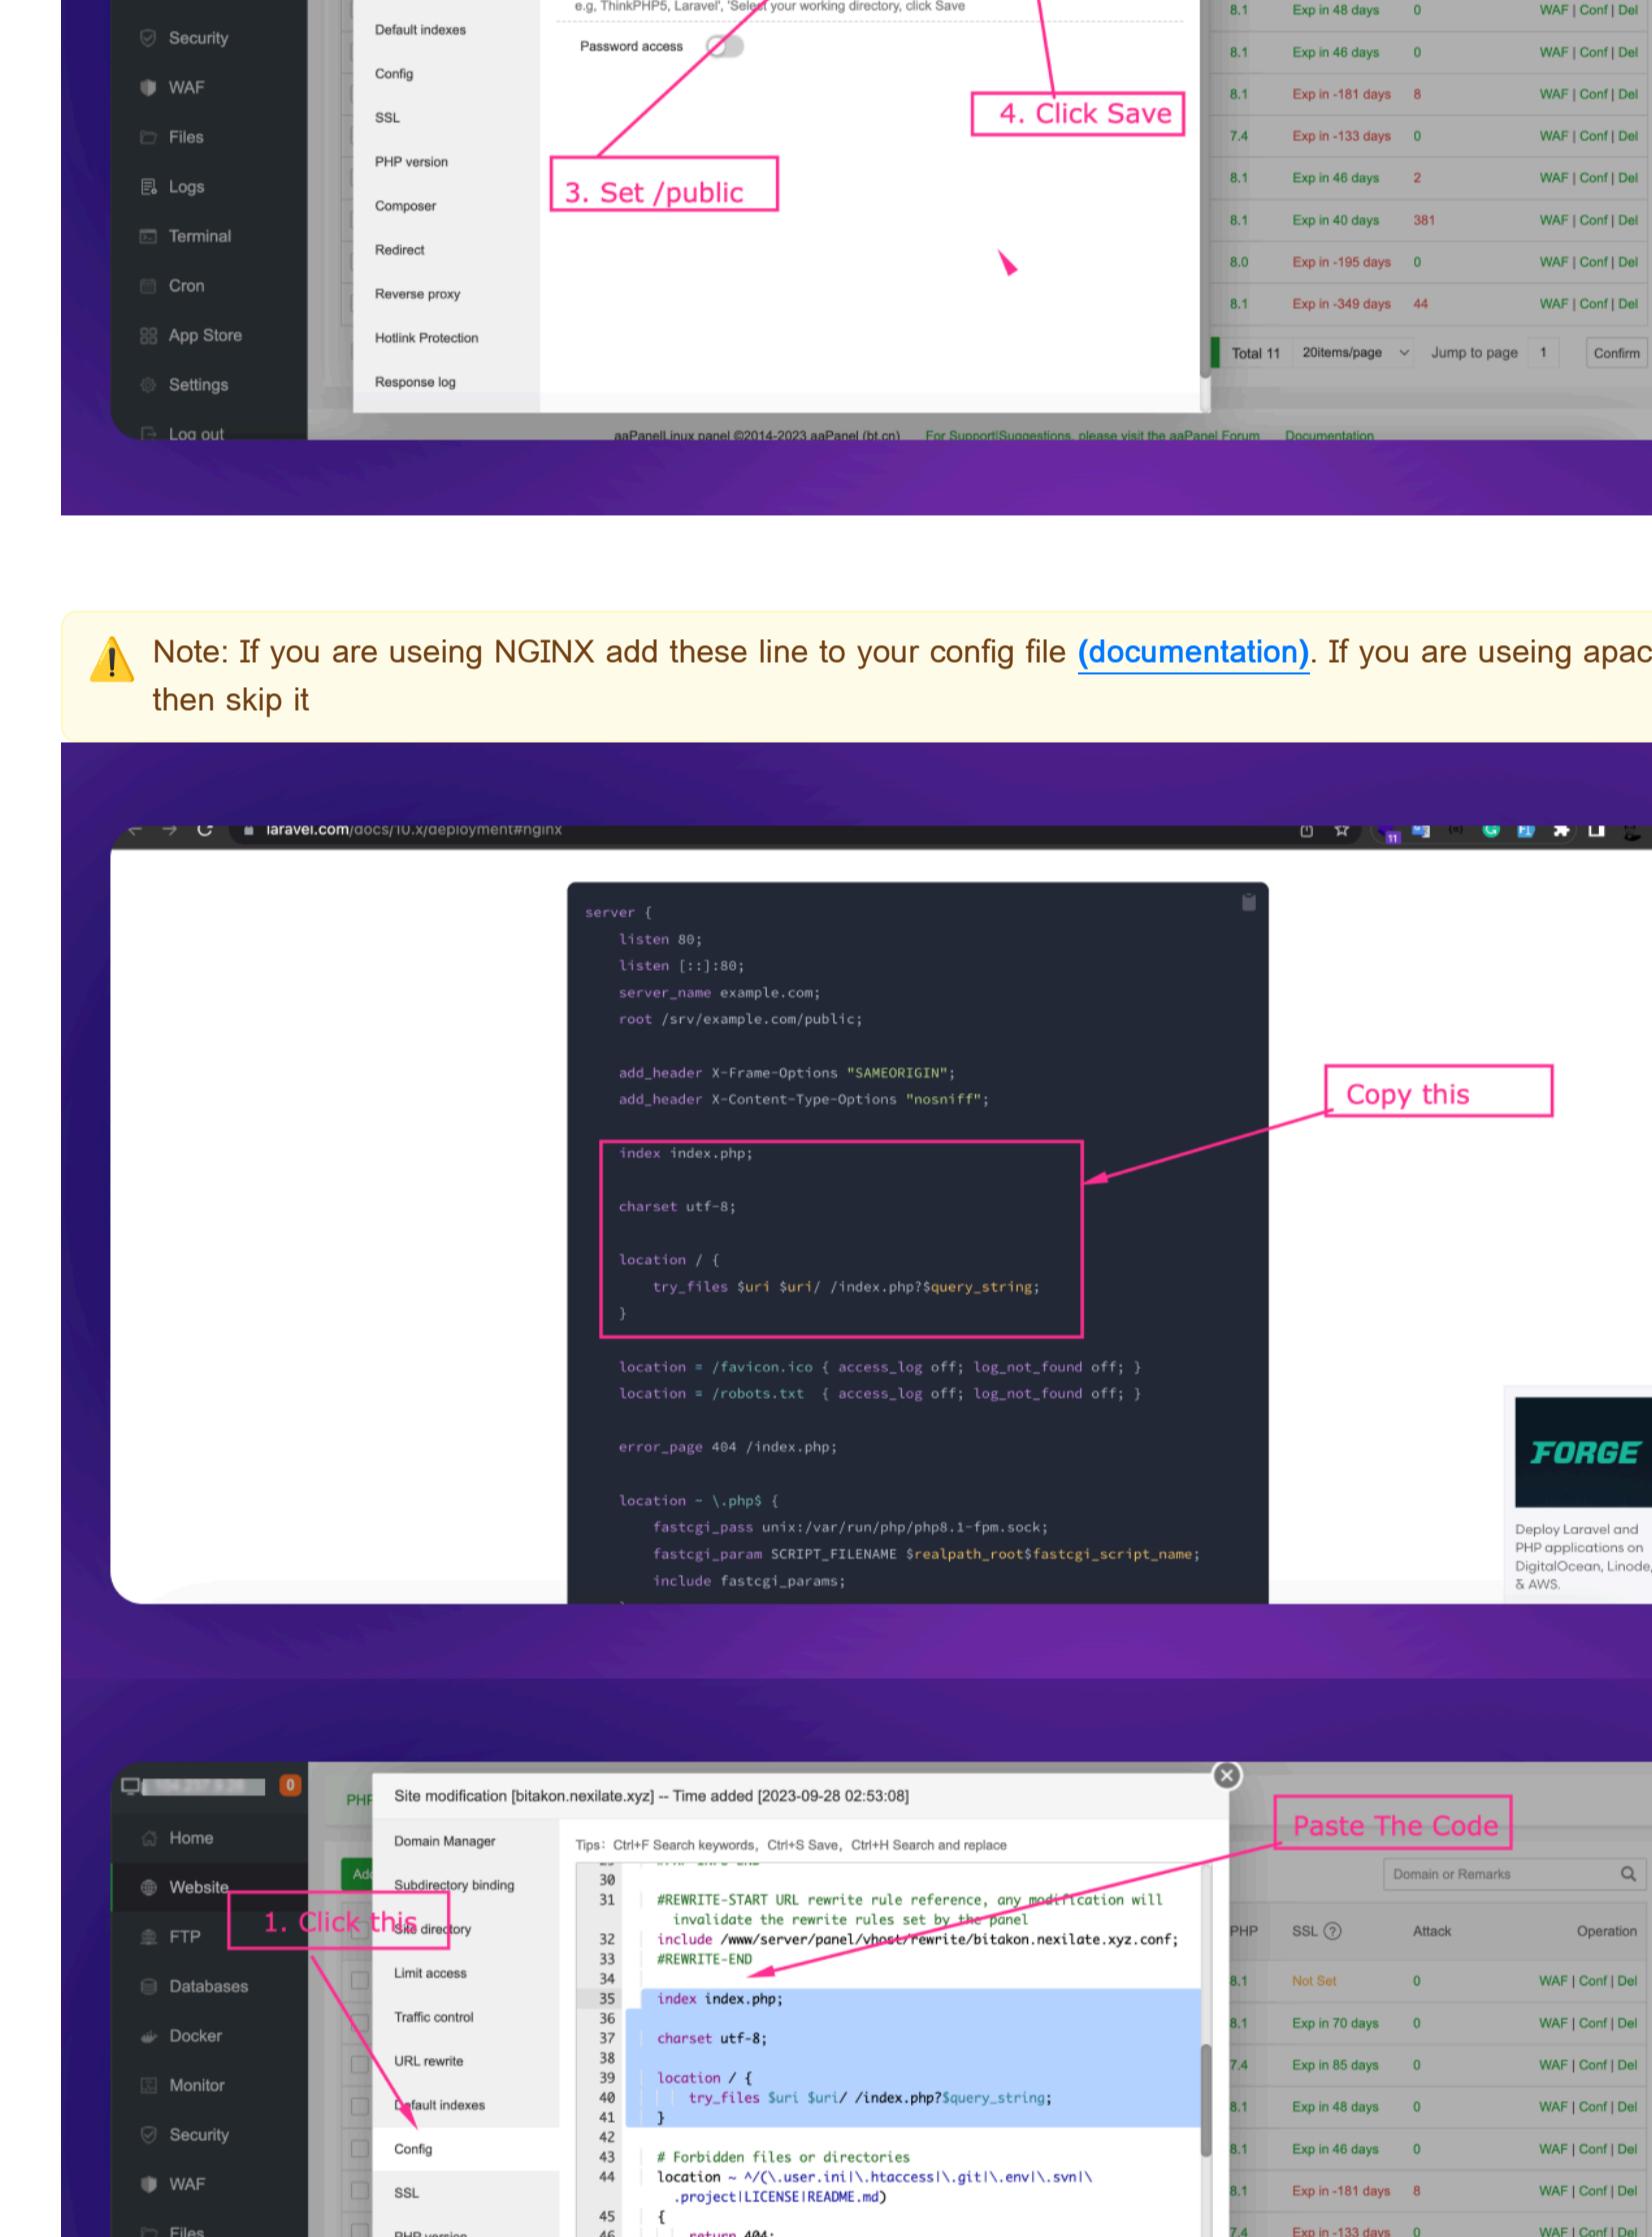

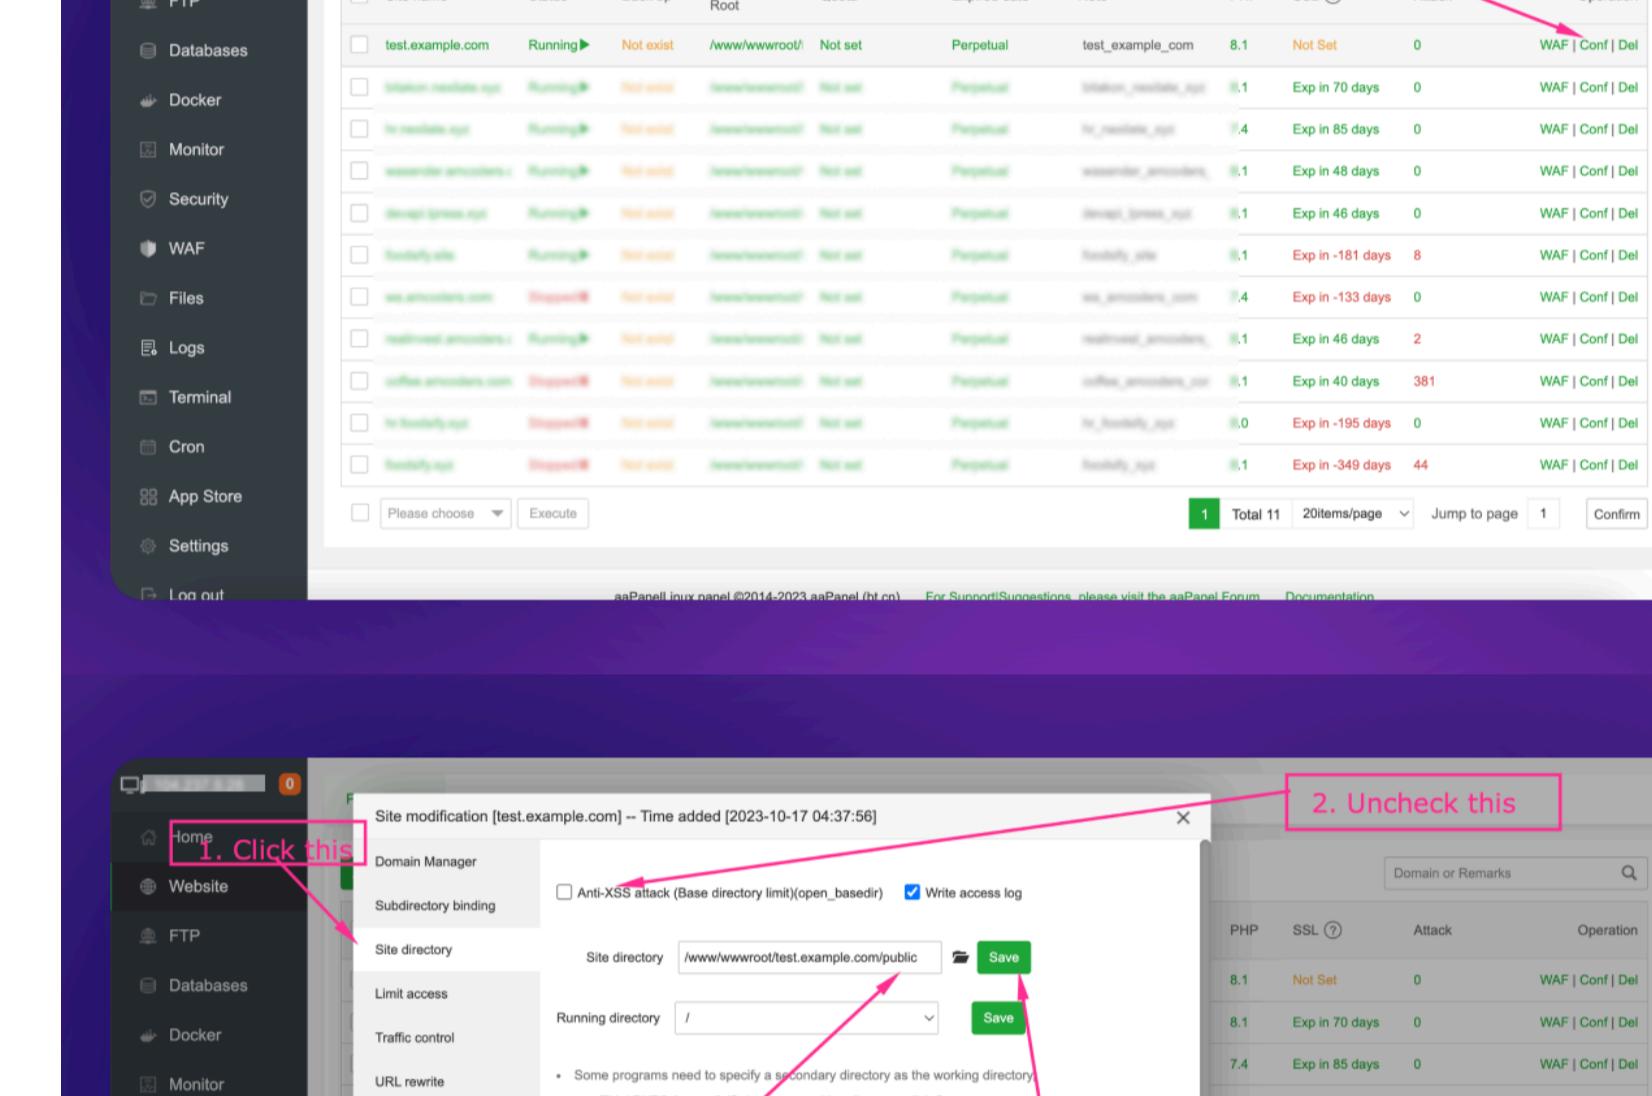

Download file from codecanyon and extract in your pc and you will get 02 folder. Listed below:

Open the wasender folder, and make zip all files. you have to upload it to your domain root (server) using ftp or file manager.

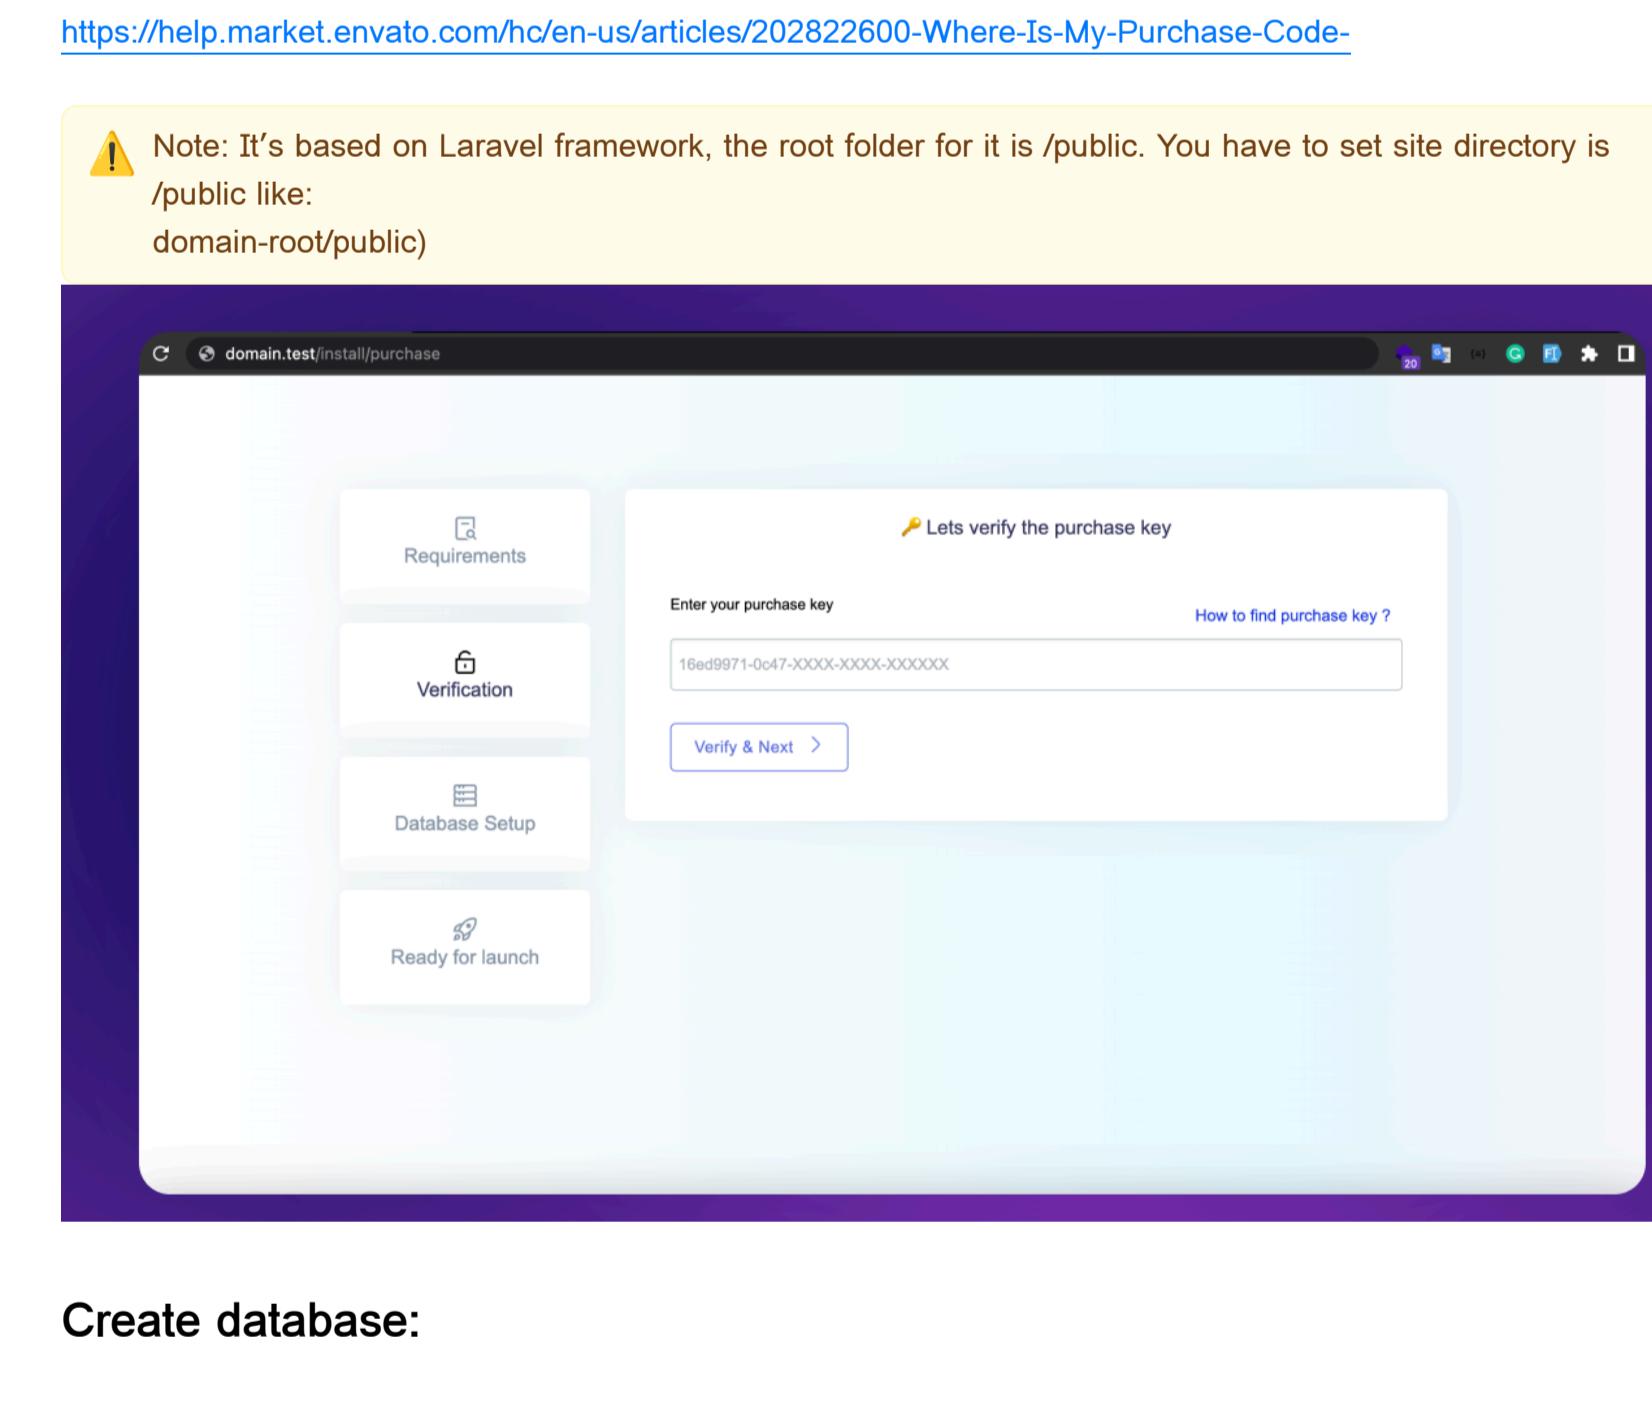

Step 2:

Now login to your control panel and Upload zip file to server:

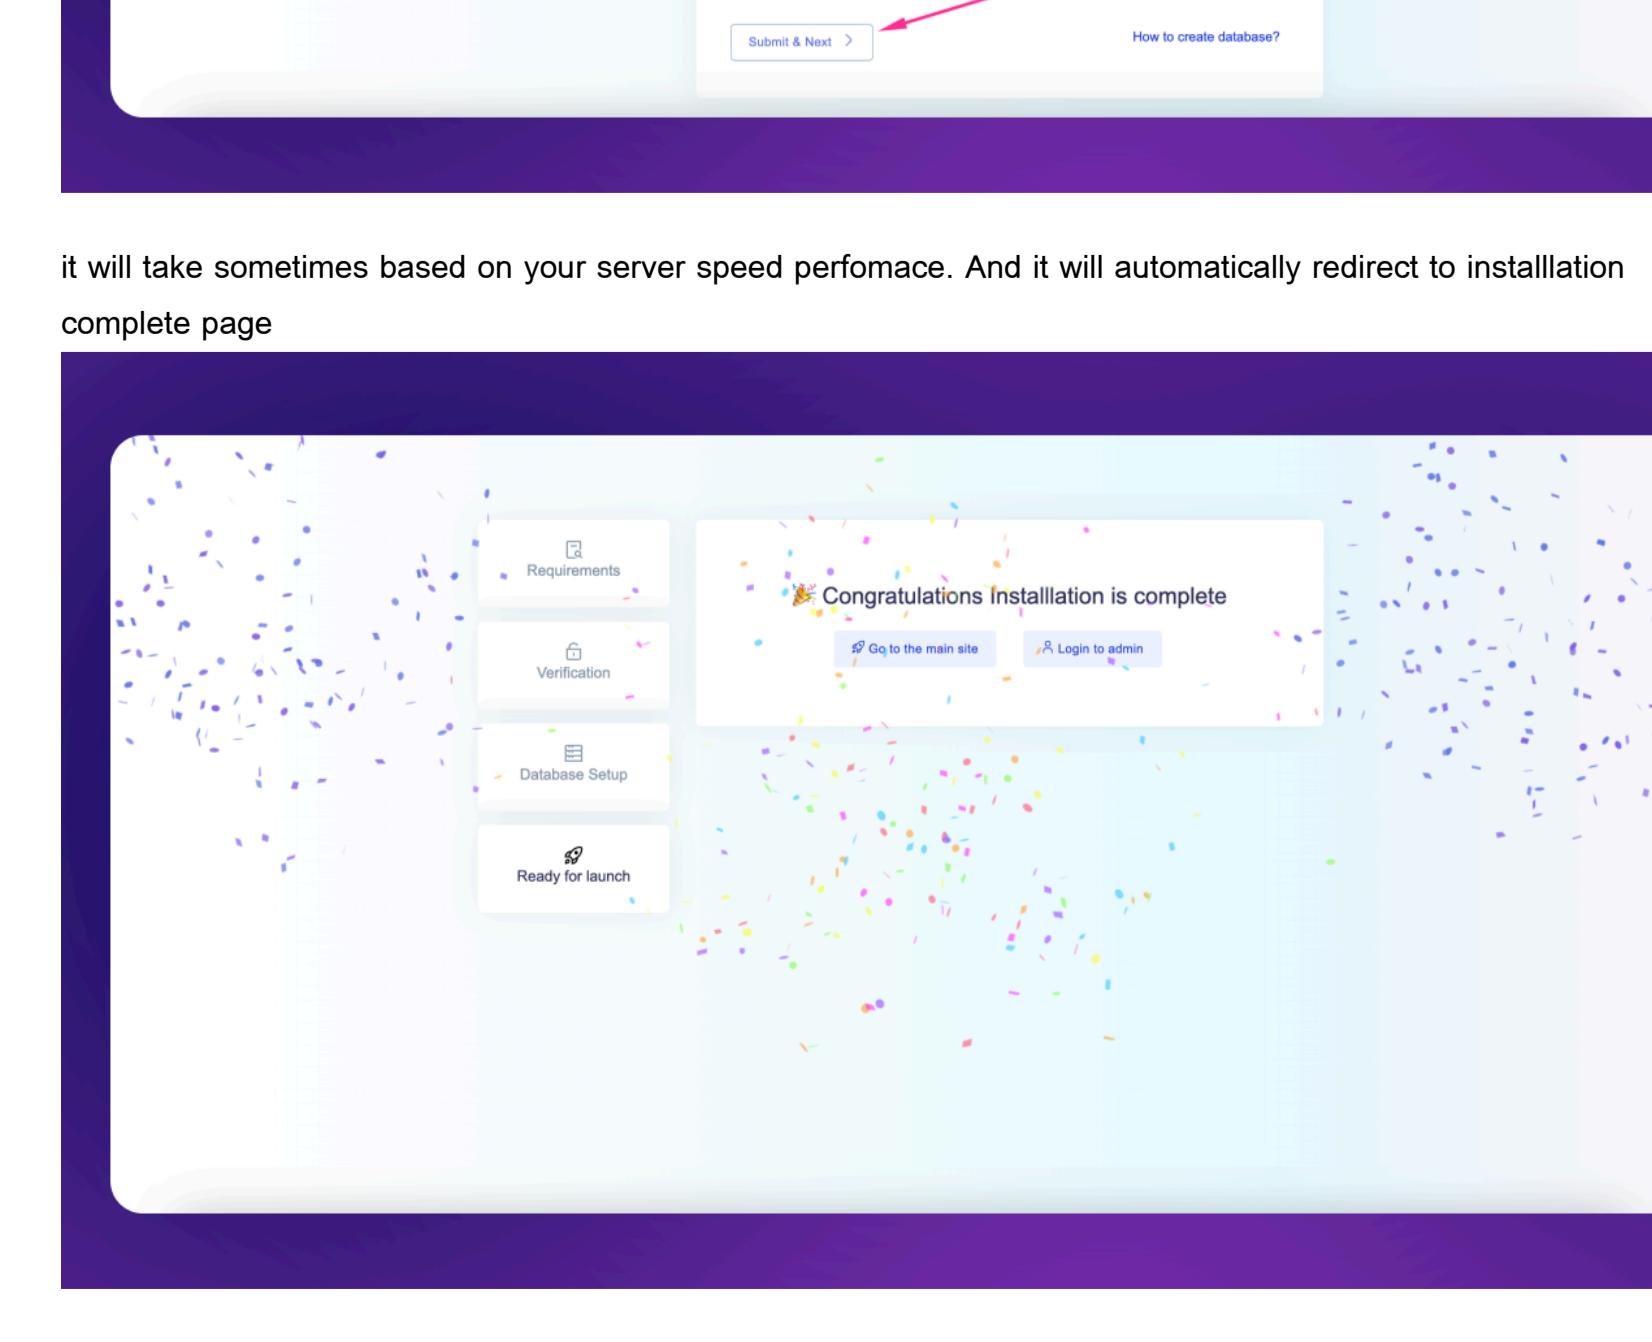

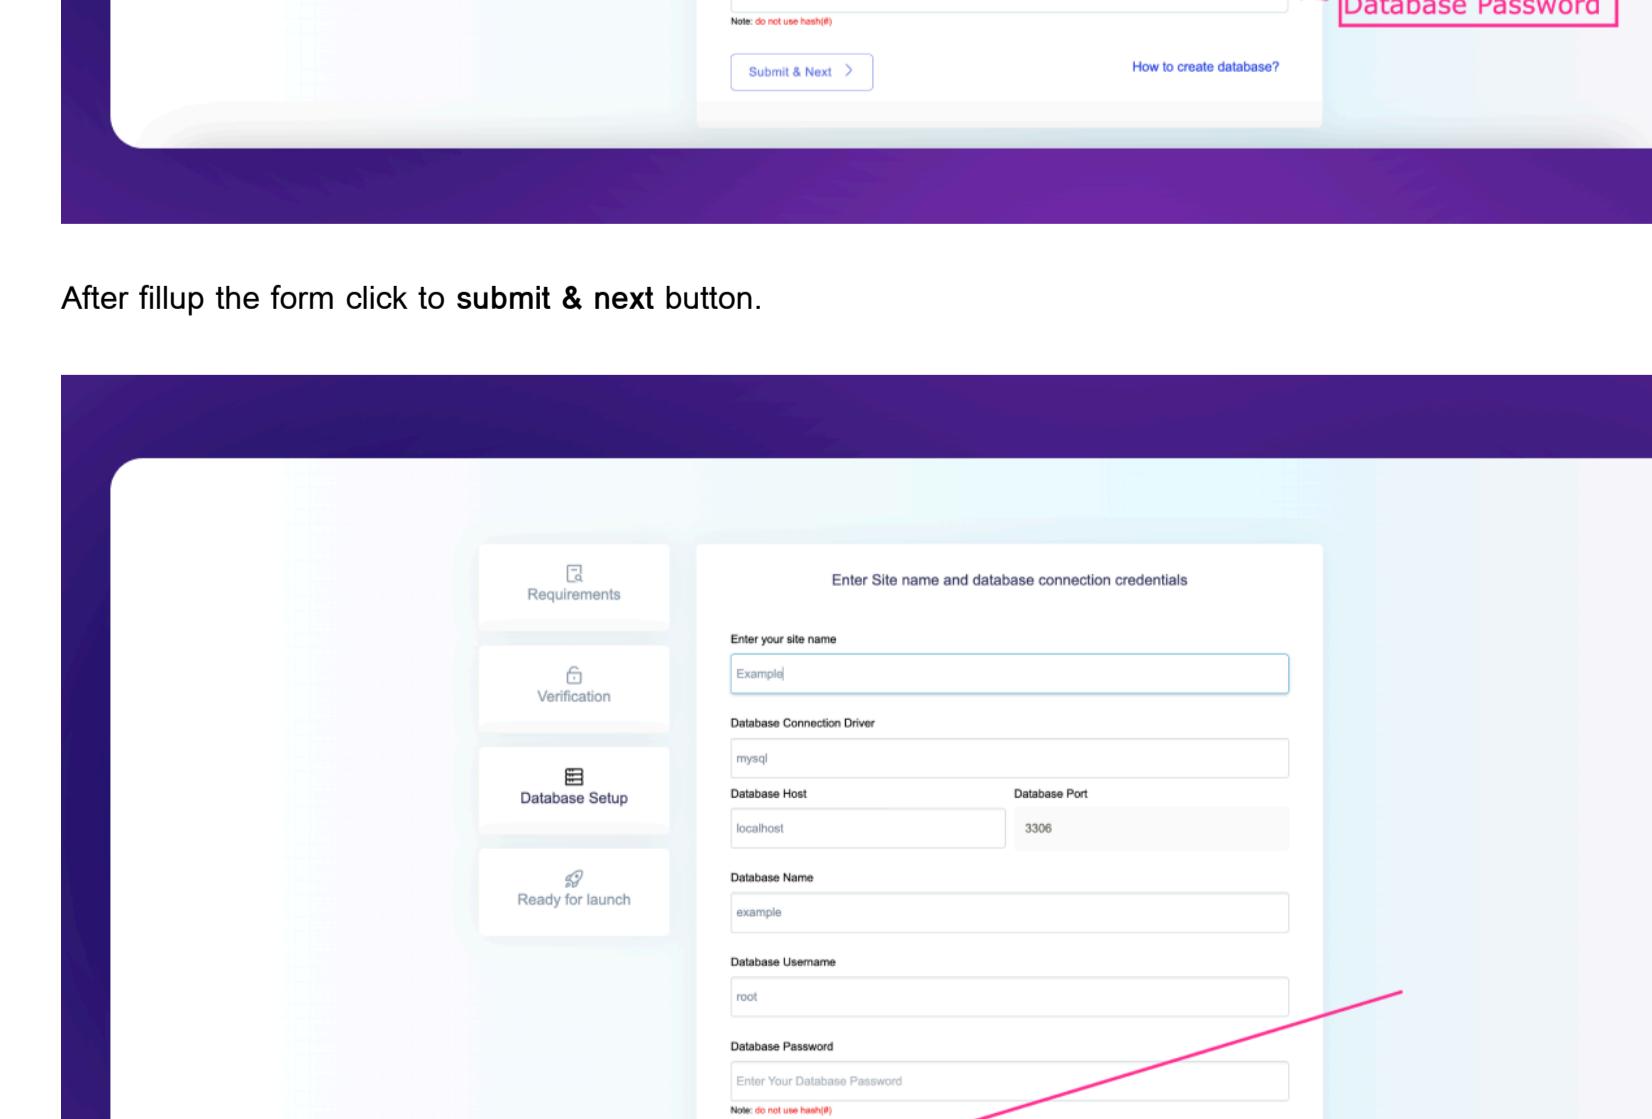

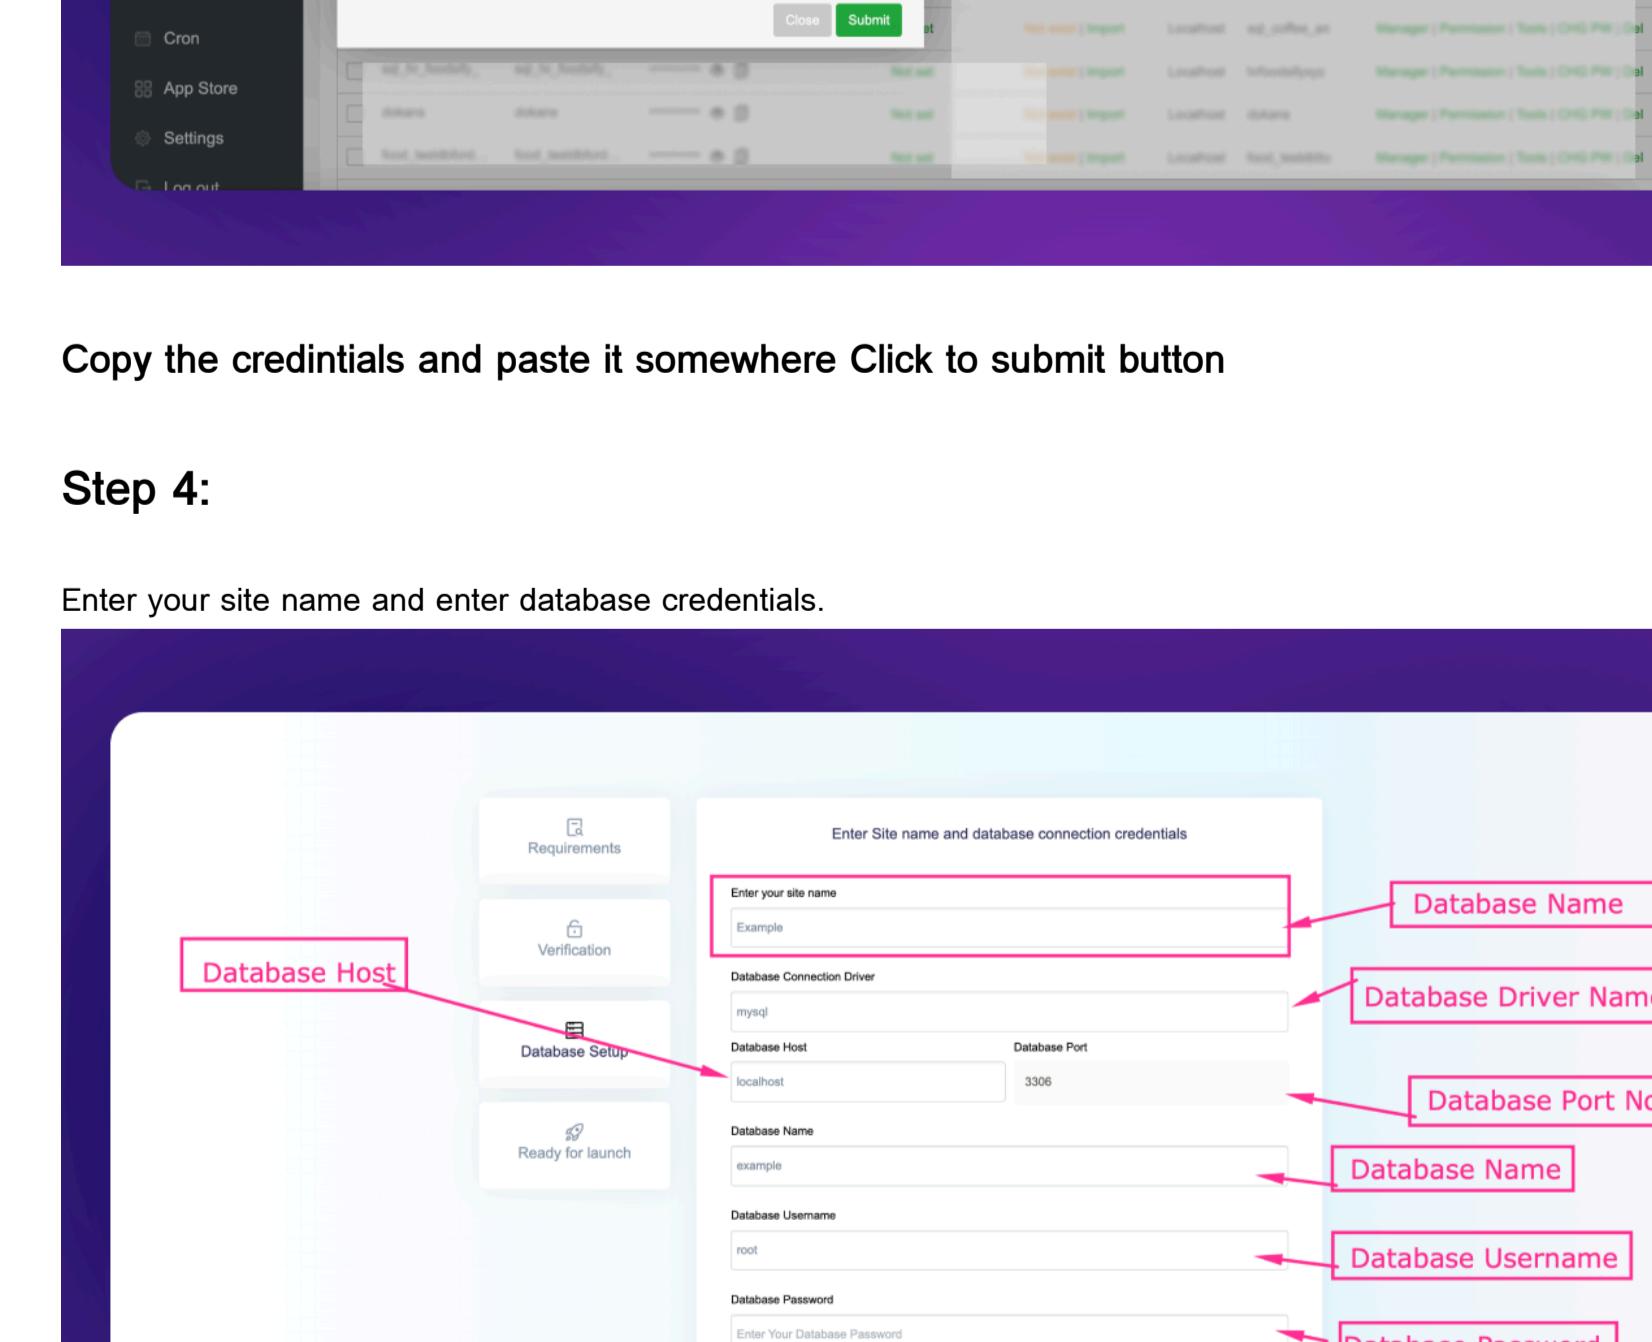

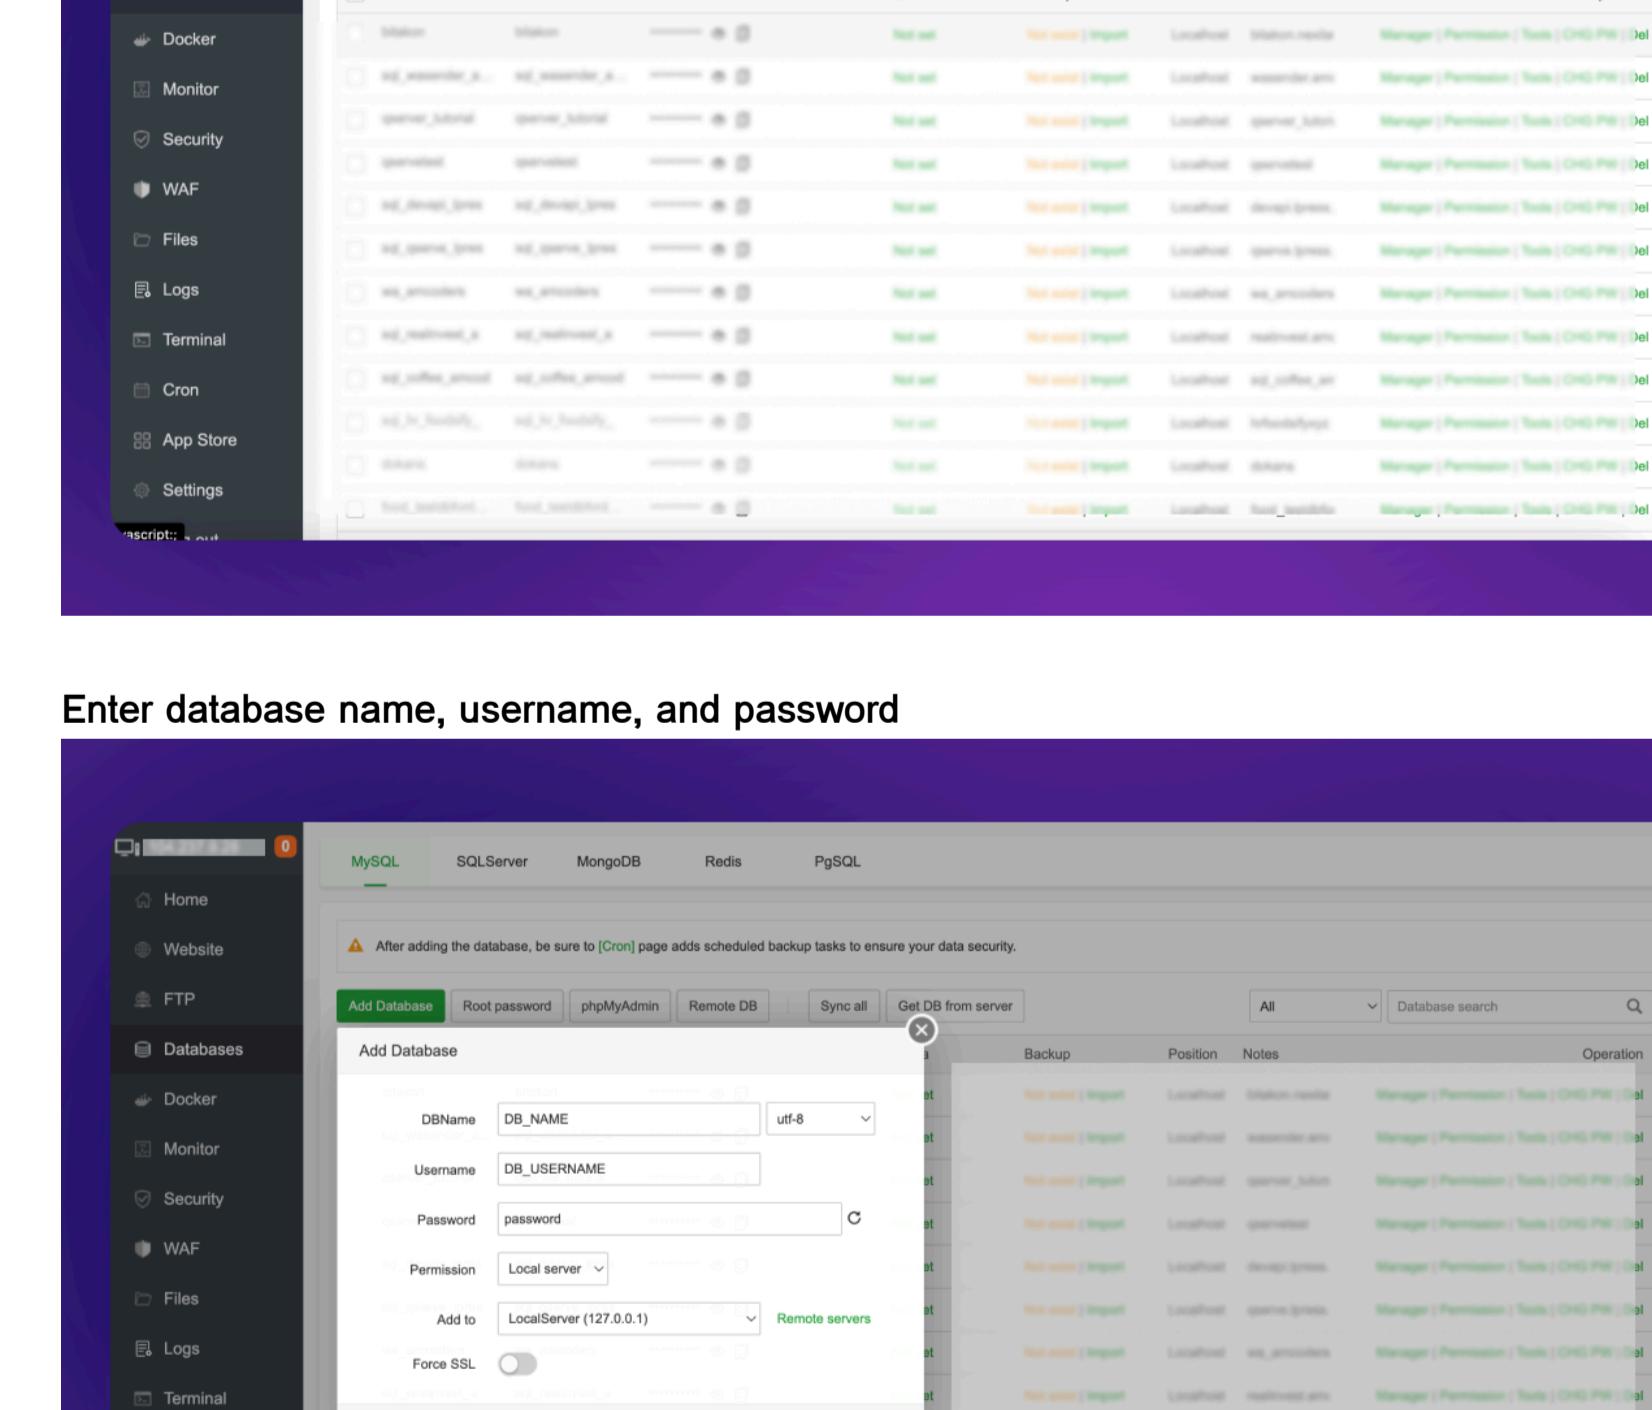

Note: It's based on Laravel framework, the root folder for it is /public. You have to set site directory is /public like: domain-root/public)

Go to your Website list and select your domain and click to config option

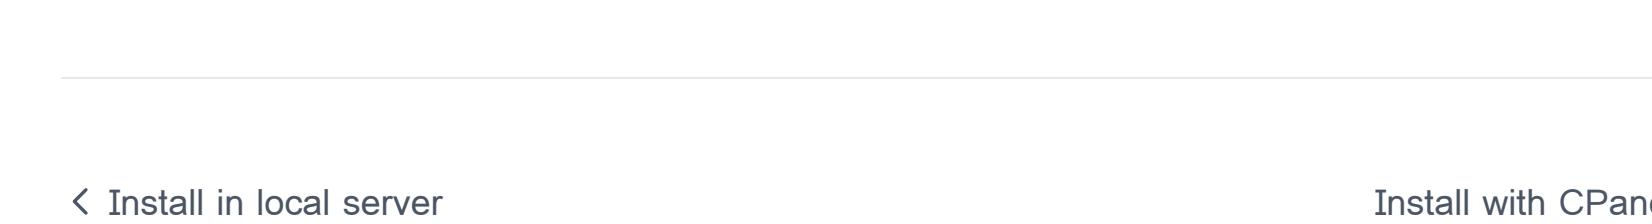

Note: If you are using NGINX add these line to your config file (documentation). If you are using apache then skip it

After fill the form click to submit & next button.

Select the **u**

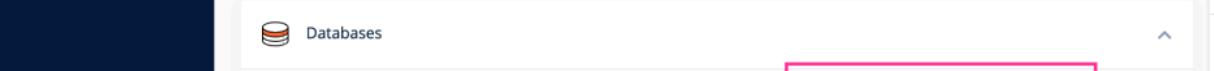

The screenshot shows the cPanel File Manager interface. The top navigation bar includes buttons for File, Folder, Copy, Move, Upload, Download, Delete, and Restore. Below the navigation is a search bar with a home icon and the text "test.eventspass.in", a "Go" button, and a "Collapse All" link. The main content area displays a file list with a header "Name". The list contains two entries: ".well-known" and "cgi-bin". On the left, a sidebar shows a tree view with a folder icon and the path "/home1/event". Below the sidebar are buttons for "File Manager", "File Editor", "File Transfer", "File Recovery", and "File Optimizer".

```
chmod -R 775 /webroot/bootstrap/cache
```

The screenshot shows the cPanel Home screen. In the top right corner, there are performance metrics: 2 / 20 (10%), Bandwidth: 16.61 MB / 48.83 GB, File usage: 47.586 / 48, MySQL® Disk Usage: 0 bytes / 4.75 GB, Addon Domains: 0 / 20 (0%), Alias Domains: 0 / 20 (0%), and Email Accounts: 0. The main content area is titled "Databases". It contains three items: "phpMyAdmin" (icon of a person with PHP), "MySQL® Databases" (icon of a database cylinder), and "MySQL® Database Wizard" (icon of a cylinder with a gear). The "MySQL® Database Wizard" item is highlighted with a red box. Below this is a "Domains" section with "Site Publisher", "Domains", and "Redirects" options.

Step 5.

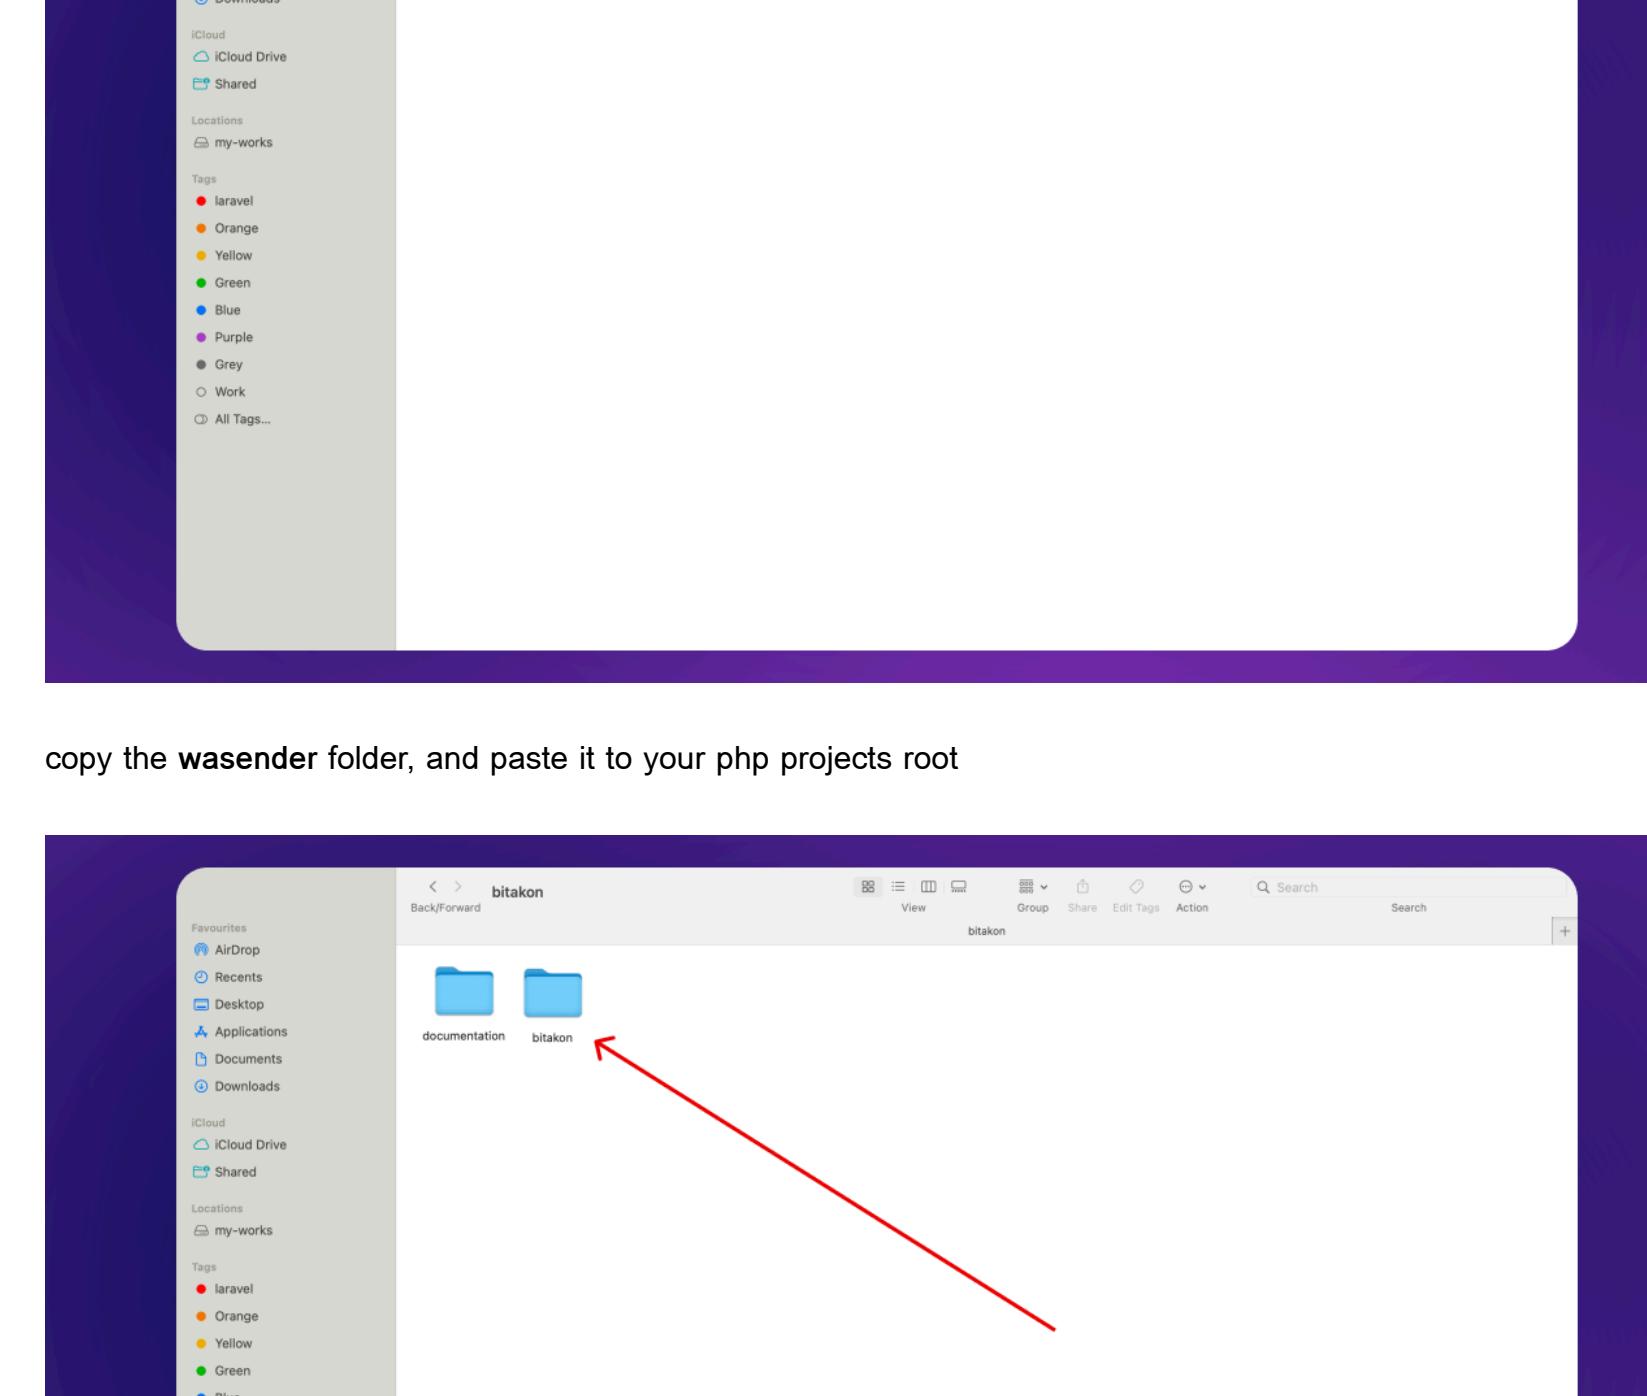

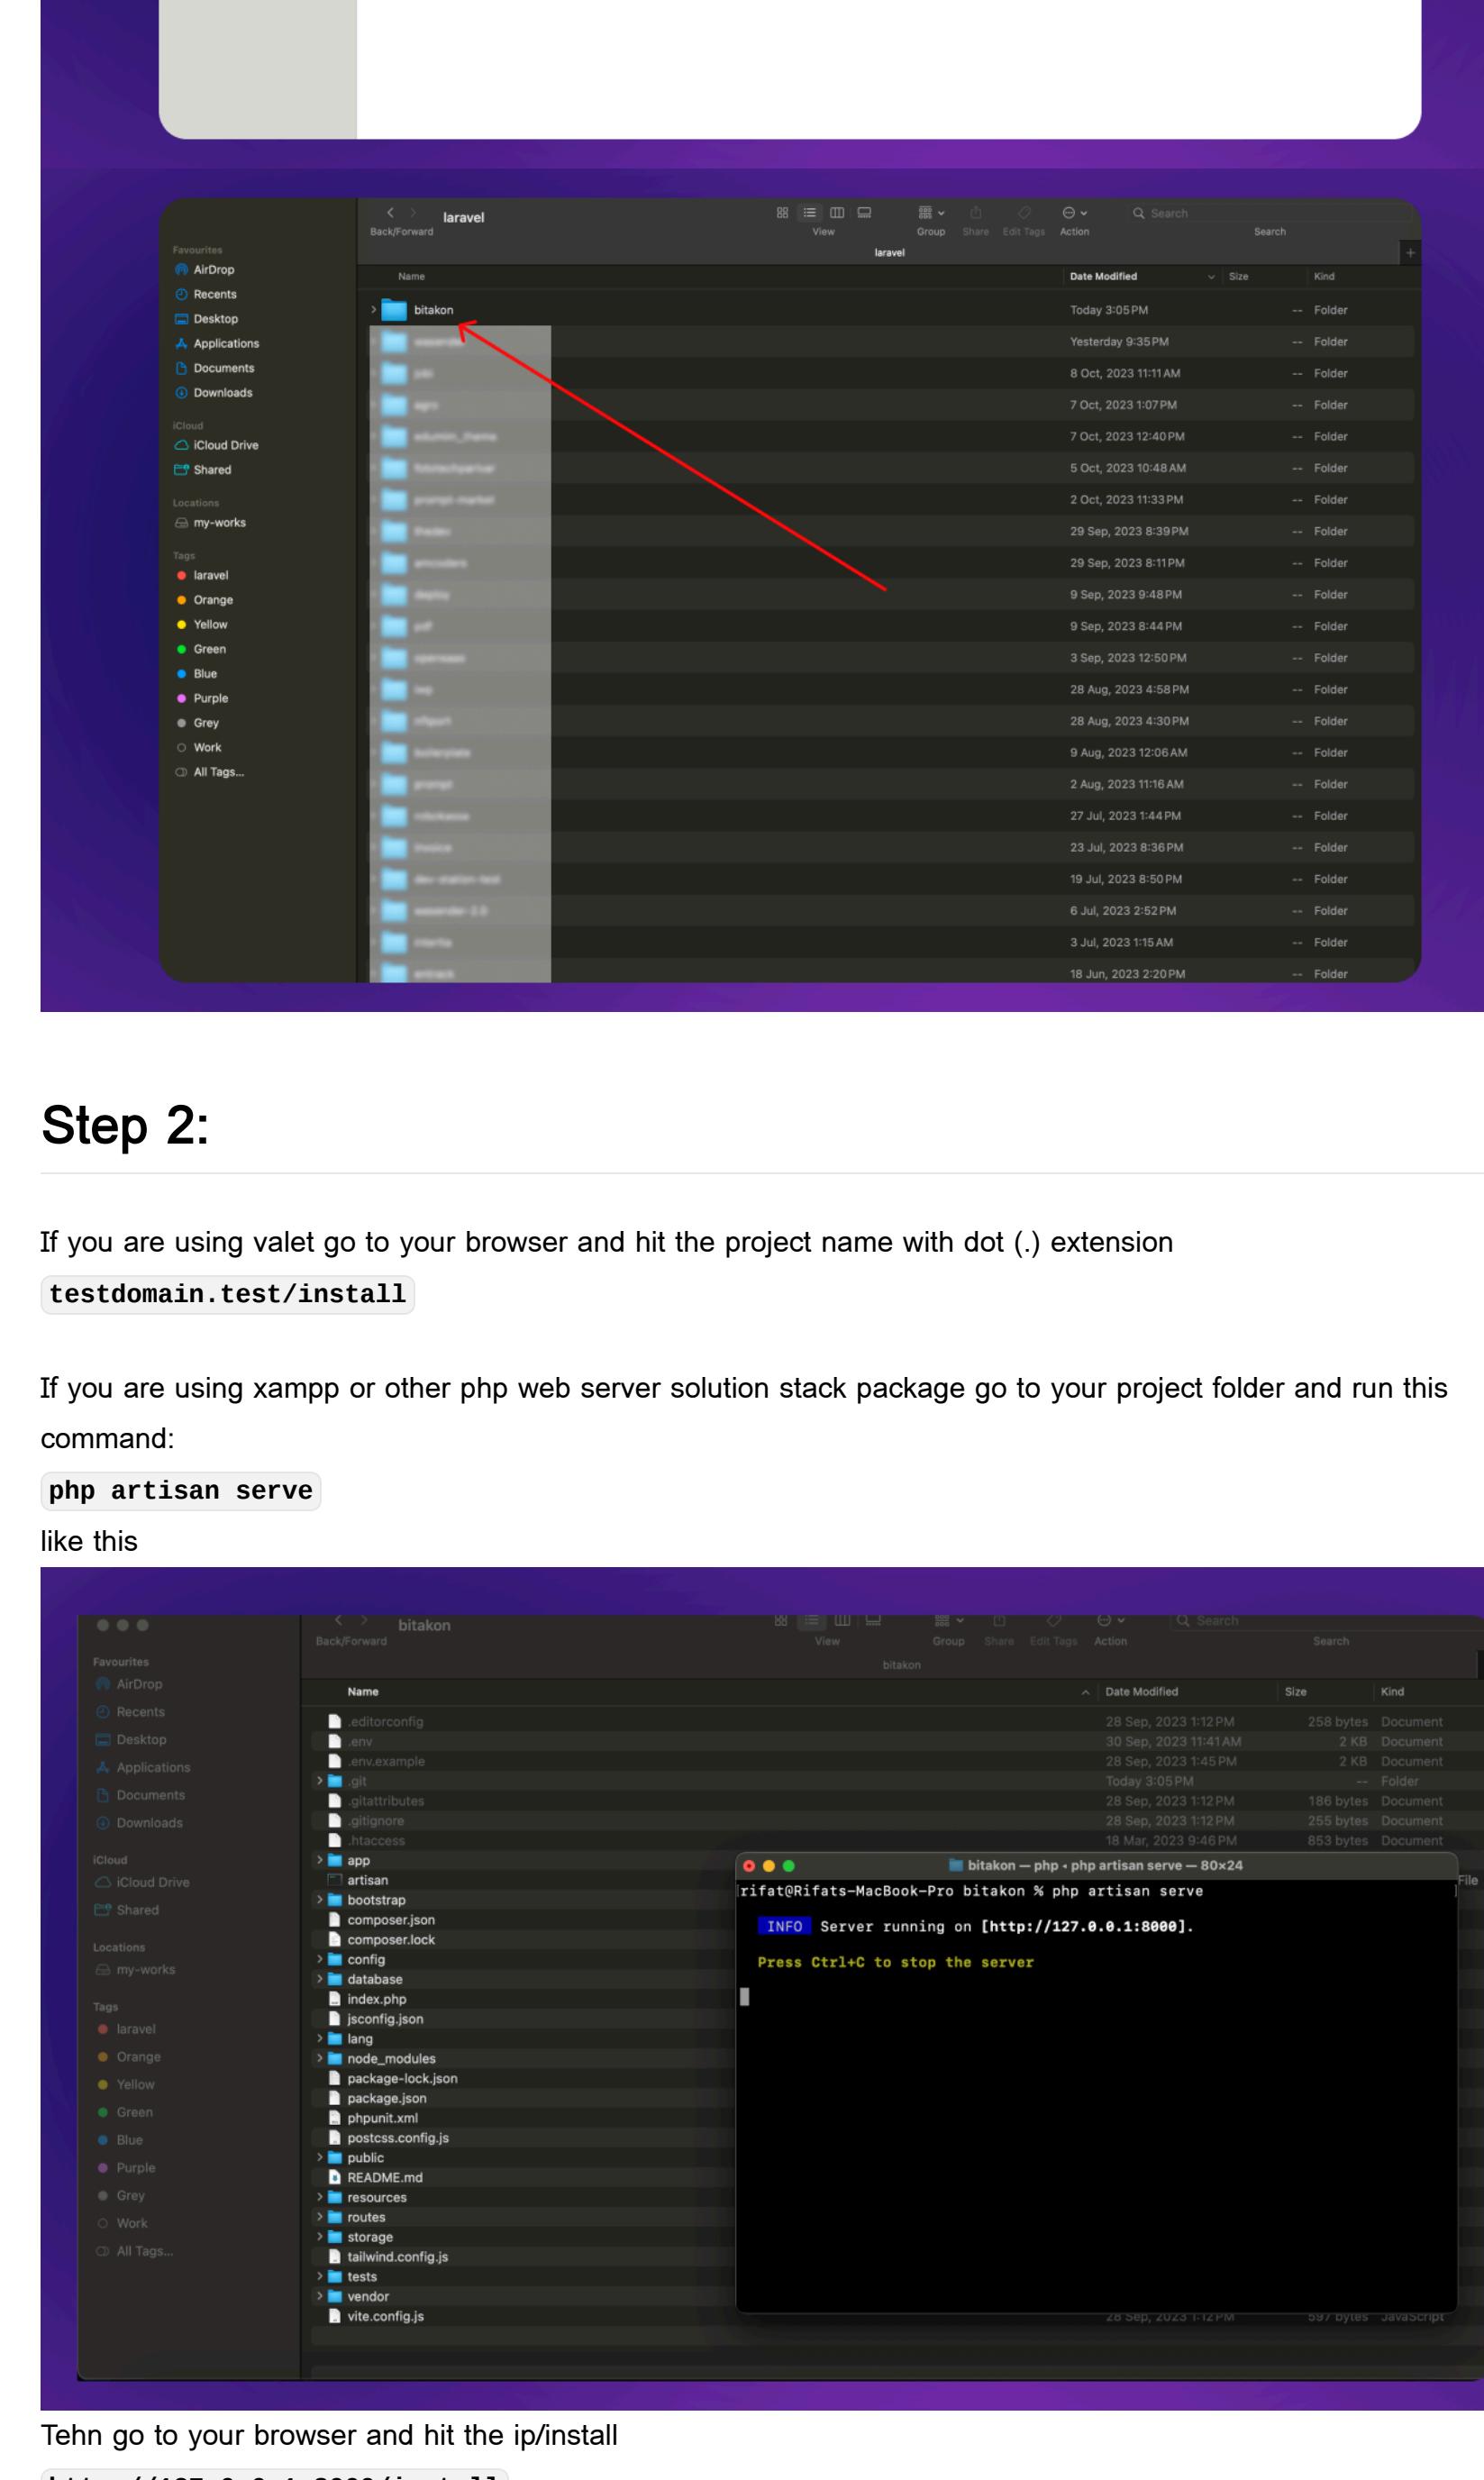

How to install WASender > Install in local server

Step 1:

Download file from codecanyon and extract in your pc and you will get 2 folder. Listed below:

1. Documentation
2. wasender

copy the **wasender** folder, and paste it to your php projects root**Step 2:**

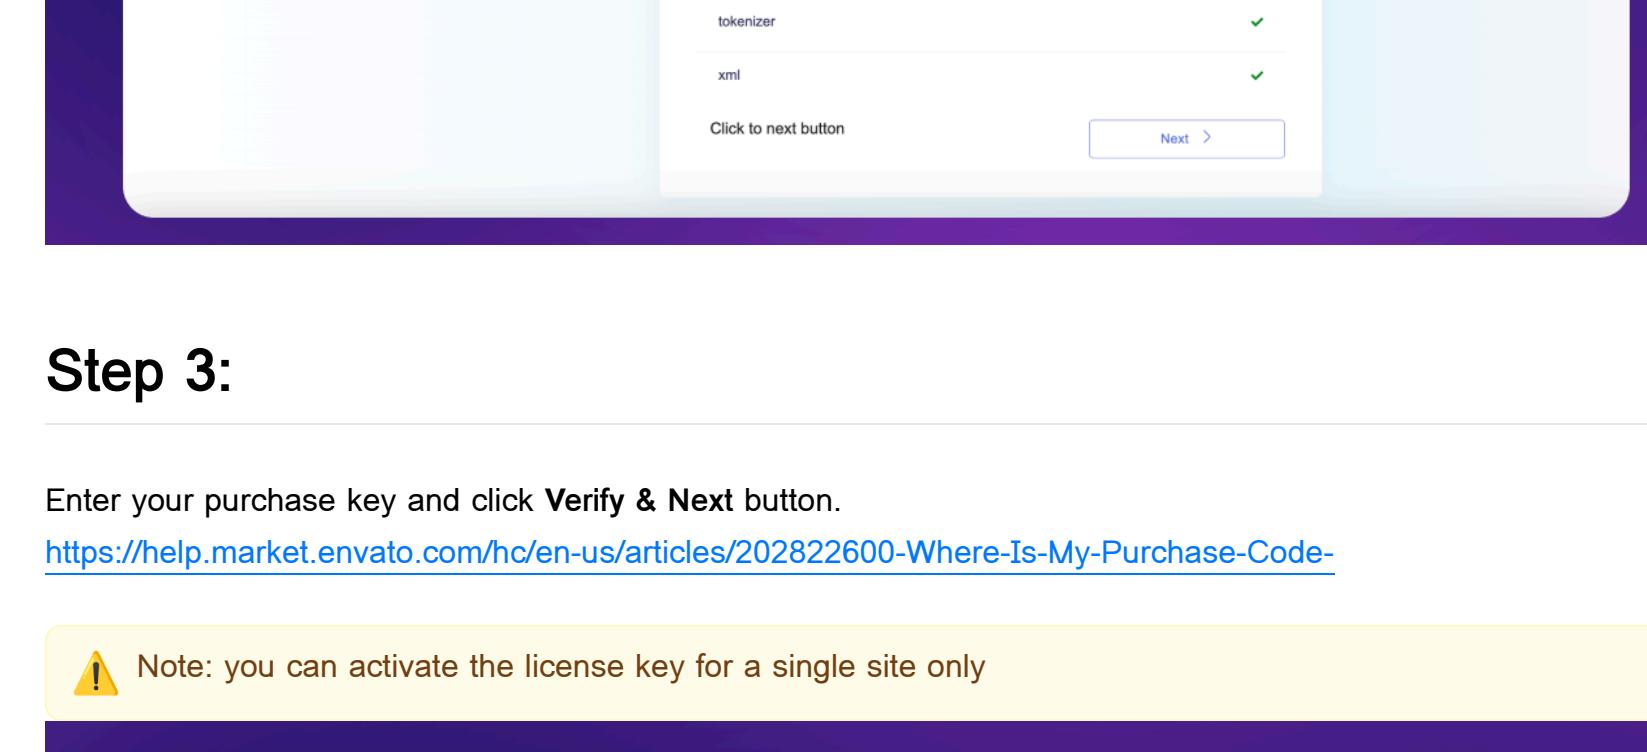

If you are using valet go to your browser and hit the project name with dot(.) extension

`testdomain.test/install`

If you are using xampp or other php web server solution stack package go to your project folder and run this command:

`php artisan serve`

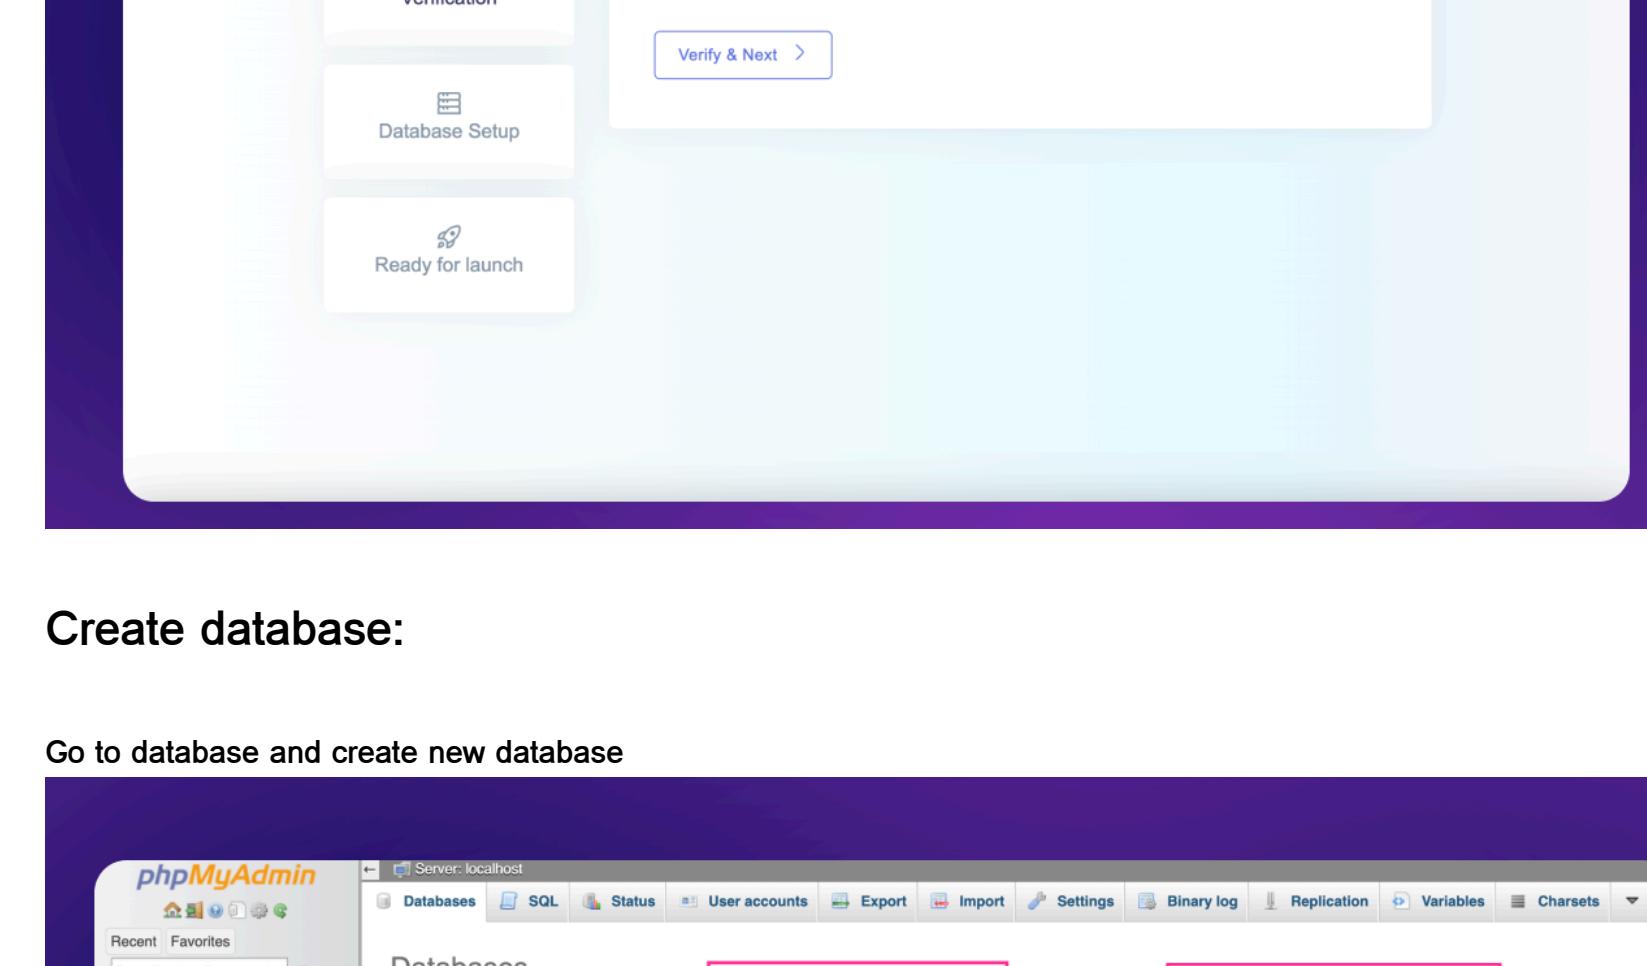

like this

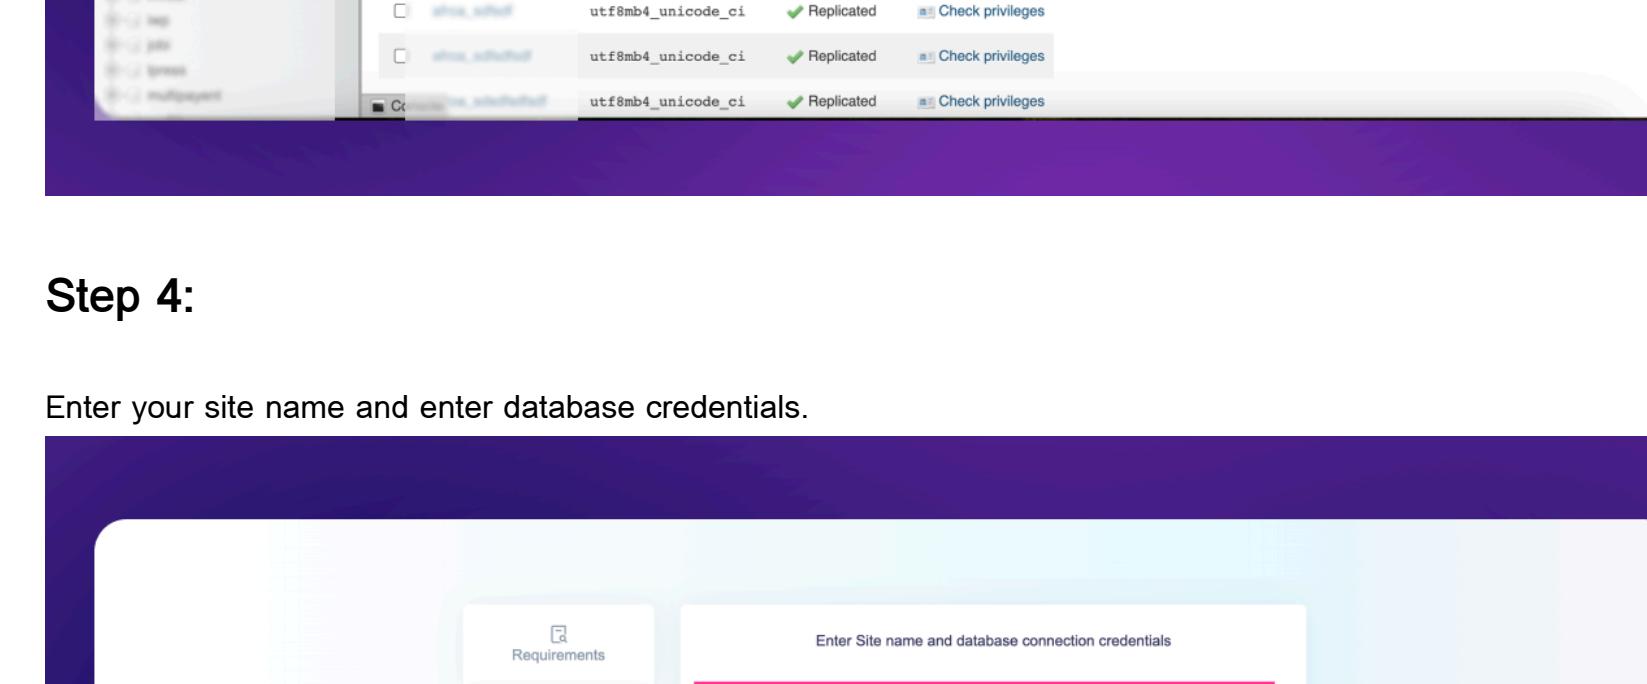

Then go to your browser and hit the ip/install

`http://127.0.0.1:8000/install`

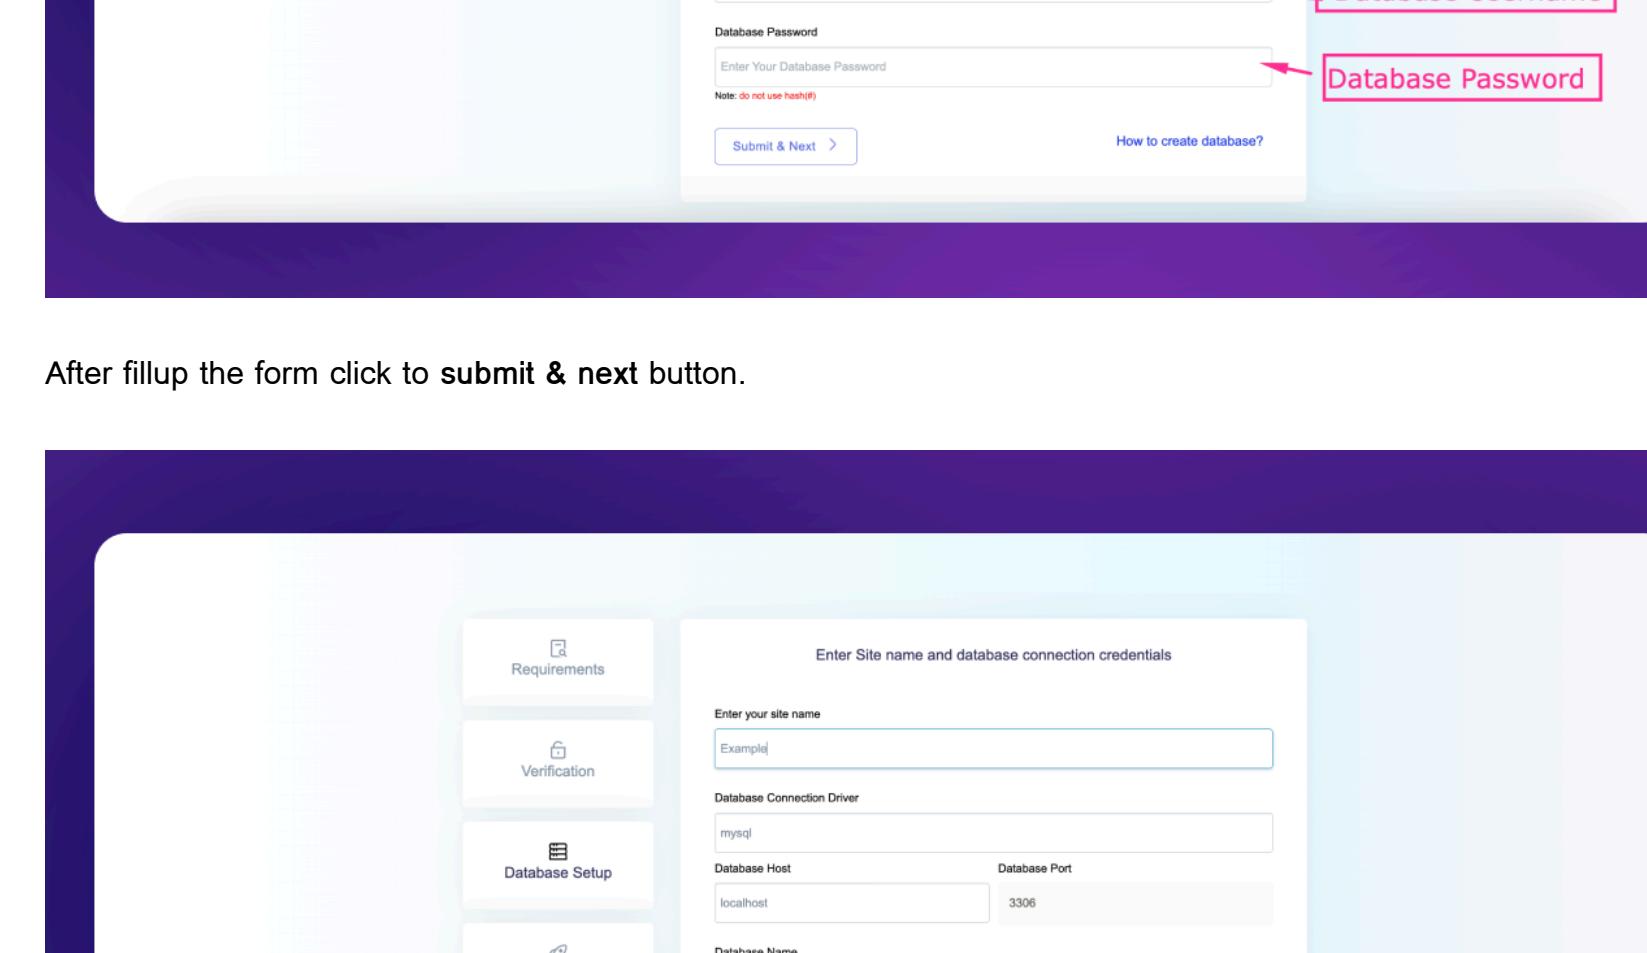

Click to next button if all required extensions are enabled

**Step 3:**

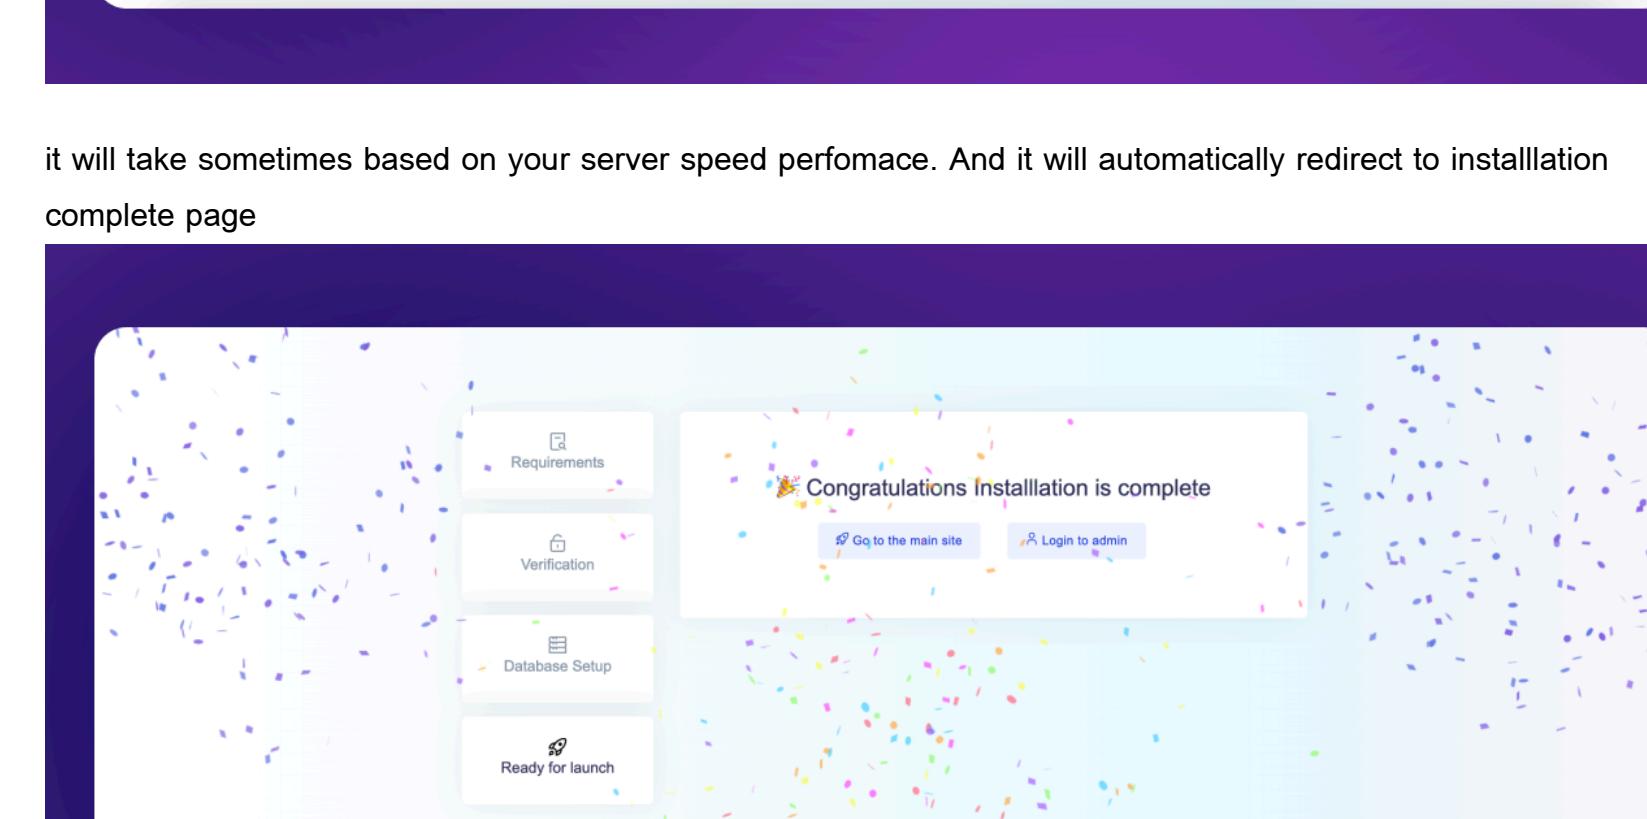

Enter your purchase key and click Verify & Next button.

<https://help.market.envato.com/hc/en-us/articles/202822600-Where-Is-My-Purchase-Code->**Create database:**

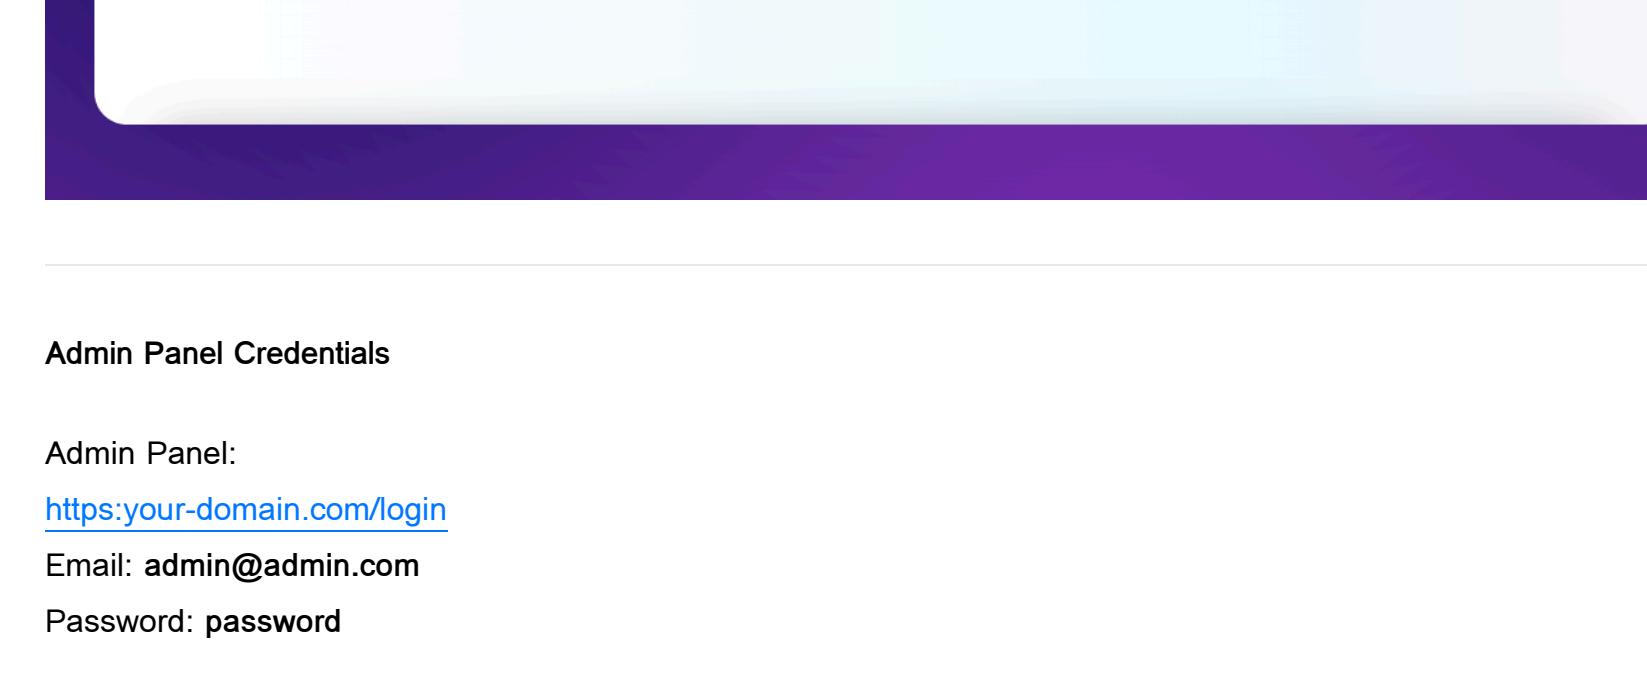

Go to database and create new database

**Step 4:**

Enter your site name and enter database credentials.

After fillup the form click to submit & next button.

it will take sometimes based on your server speed performance. And it will automatically redirect to installation complete page
